<b>Abstract (for dissemination)</b>	<i>This thesaurus description report describes the methods used to produce the monolingual version of the European Language Social Science Thesaurus (ELSSST). It also contains the actual listings of the 46 main hierarchies and an alphabetic listing of all the 1,523 terms within those hierarchies, the included top terms of other hierarchies and stand-alone terms.</i>

## 1. Summary

The deliverable D4.1, the monolingual version of the social science thesaurus, is the first stage in fulfilling the objectives of the LIMBER project. Version 1 of the monolingual thesaurus, created from the existing thesaurus of the UKDA (HASSET), was completed on 20th January 2001, 3 weeks later than the original delivery date of 31st December 2000, but on time within the revised timetable agreed at the 12th December 2000 management meeting in Abingdon. This version contained 26 main hierarchies, 1,200 preferred terms and 700 synonyms, with 6,625 relationships between them. This thesaurus was to be published in a RDF format, which had been adapted by Brian Matthews of CLRC from the RDF schema for thesaurus, developed by Phil Cross and Dan Brickley of ILRT (Institute for Learning and Research Technology). However, the RDFschema has not been finalised due to ongoing adaptations as architecture and software are developed. Hence the monolingual thesaurus published in this report is in the traditional printed format of hierarchical and alphabetical term listings. Fortunately the delay in publication has allowed refinement to the thesaurus to incorporate the evaluation and feedback from the CESSDA (Council for European Social Science Data Archives) user group. Hence deliverable D4.1 is now version2 of the monolingual thesaurus and contains 46 main hierarchies, 1,523 preferred terms and 868 synonyms, with 8,448 relationships between them. We feel confident that this expanded version will be a valuable asset to the whole social science community and form a solid basis for the other deliverables of the project.

## 2. Introduction

### 2.1 Background

The objectives of the LIMBER project are to:

- 1) Research and develop a metadata model and representation (in XML and RDF) for social science datasets to allow their integration within and across data archives.
- 2) Develop and evaluate a multilingual thesaurus to be used to index and access social science datasets in data archives.
- 3) Develop and evaluate a multilingual query tool drawing on the multilingual thesaurus to allow queries to dataset archives to be made in several languages.
- 4) Develop and evaluate a multilingual retrieval tool drawing on the multilingual thesaurus to allow keyword and phrase translation in retrieved datasets into several languages.
- 5) Develop and evaluate a multilingual tool to assist queries and retrieval with explanations that draw on the metadata to guide the users in their task.
- 6) Develop and evaluate tools to support the construction and maintenance of datasets held in an archive using automatic indexing that draws on the multilingual thesaurus.
- 7) Evaluate an XML metadata server using the metadata model and representation for social science datasets and the multilingual thesaurus.

The deliverable (D4.1), the monolingual version of the social science thesaurus, is the first stage in fulfilling the objectives 2-7 as outlined above from the Project Summary of the LIMBER Annexe 1 "Description of Work".

The use of a controlled vocabulary to index metadata increases the relevance of retrieval and when this controlled vocabulary is structured in a thesaurus it further helps the searcher to refine or broaden his search. The UKDA's Humanities and Social Science Electronic Thesaurus (HASSET) at present is an invaluable tool within the partner's own metadata search engine.

The UKDA has developed and used the terminology from the monolingual social science thesaurus (HASSET) over the past twenty years. During that time a great deal of expertise in the construction and maintenance of thesauri has been developed. WP6 aims to exploit and extend both the HASSET thesaurus and the expertise held within the user partners. First, by producing a broad-based social science thesaurus suitable for use by others and second, to translate this thesaurus into multiple languages.

HASSET has been developed to cover terminology at specific question or variable level and as such, is a comprehensive and detailed thesaurus covering the social and behavioural sciences. HASSET is the ideal tool to use as the base for translation into multiple languages. It has the advantage of providing the cost benefit of reusing an existing thesaurus with good content coverage of social sciences built up over many years by experts in the field. However, the disadvantage is that the complexity of the thesaurus would need to be reduced to ease the translation of keywords, and to provide a broad structure suitable for use by multiple-sites across nations.

Reducing HASSET to its broad base structure (from approximately 5000 terms) by removing the specific terms relevant to the partner's holdings only, a general purpose social science tool will be created (of approx. 1500 terms). In its multilingual form (ELSST - European Language Social Science Thesaurus) equivalent terms will be defined in French, German and Spanish and they will all be marked up in RDF (Resource Description Framework).

When the ELSST thesaurus is both coded into RDF with the supporting definitions, and converted into a multi-lingual thesaurus, then it will be capable of supporting the language engineering tools to generate the multi-language user interface which will be developed in WP7. It will provide the ideal thesaural tool (ELSST) for developing an integrated cross-national system and will provide participating organisations with an excellent tool to aid common searching and retrieval.

## 2.2 Work plan

The work programme as described in the WP6 work package in the LIMBER Annexe 1 "Description of Work".

- 1) Reduce HASSET to a broad base structure removing many of the lower level detailed terms. This will provide a general-purpose tool and ease translation into various languages.
- 2) Widen coverage to include methodological, spatial and broad research topic terms in order to describe fully the content of the metadata and to allow the development of research orientated query tools. This will make it a suitable tool for use within the NESSTAR system and add substantially to NESSTAR capabilities for exploiting the rich research resources held across European archives, data centres and statistical offices.

## 2.3 Thesaurus Structure

**a) Preferred Term:-** Every concept in a thesaurus is assigned a term, consisting of a single word or phrase, which is considered the most apt to describe the concept. The term is unique within the thesaurus and qualifiers can be used to ensure this occurs. For example LABOUR (BIRTH) and LABOUR (WORK). It is this term that is always applied when indexing thus ensuring consistency and high relevance when searching.

**b) Use For (UF):-** Every preferred term can have "use for" relationships with synonyms describing the same concept. For example EMPLOYMENT uf WORK. These act as lead in terms to the preferred term when searching on the controlled vocabulary of the thesaurus or as alternatives in a free text search. They can also be used for equivalent terms in different languages or different domain thesauri.

**c) Scope Note (SN):-** Although the display of a thesaurus entry within the subject concept tree is usually sufficient to convey meaning, sometimes ambiguity can arise. In these cases a scope note can be attached to a preferred term. For example HOMEWORKERS sn WORKERS WORKING IN THEIR OWN HOMES ON MATERIALS SUPPLIED BY THE EMPLOYER. This obviously aids assignment of indexing terms and selection for searching.

**d) Notation Code (NC):-** In some thesauri a notation can be assigned to each preferred term, so that the thesauri can act as a subject classification useful for physical location of resources. For Example ECONOMIC AID N.C. L84.50.20

**e) Narrower Term (NT):-** Every preferred term can have "narrower term" relationships to other preferred terms. These narrower terms have concepts narrower in scope to the concept covered by the preferred term being assigned the relationship. For example TRADE nt DOMESTIC TRADE. Hence when browsing the thesaurus a search can easily be switch to a narrower concept that more precisely covers the subject area required. Automatic inclusion of a search terms narrower terms is also a way of widening a search.

**f) Broader Term (BT):-** Every preferred term can have "broader term" relationships to other preferred terms. These broader terms have concepts broader in scope to the concept covered by the preferred term being assigned the relationship. For example TRADE bt ECONOMICS. This type of relationship is especially useful when browsing the thesaurus.

**g) Related Term (RT):-** Every preferred term can have "related term" relationships to other preferred terms. A related term relationship is used to make associative links between terms which are conceptually related but in other lines of the hierarchy or other hierarchies of the thesaurus. Related terms are those which have a close conceptual link to the preferred term but which are not in an equivalence relationship (UF) or in a hierarchical relationship (BT/NT). For example TRADE rt CONSUMPTION.

**h) Top Term (TT):-** Some thesauri also give every preferred term "top term" relationships to the very broadest concept of the hierarchies in which term appears. These are obviously terms that have no "broader term" relationships to any other concept. For Example DOMESTIC TRADE tt ECONOMICS

These relationships above can be displayed in various ways, the alphabetic listing, below, show all the relationships to a single preferred term.

**TRADE NC=N65/75**

**SN TO INDEXERS: USE A MORE SPECIFIC TERM IF AVAILABLE**  
**UF COMMERCE**  
**NT DOMESTIC TRADE**  
**INTERNATIONAL TRADE**  
**MARKETING**  
**RETAIL TRADE**  
**TRADING HOURS**  
**WHOLESALE TRADE**  
**BT ECONOMICS**  
**TT ECONOMICS**  
**RT COMMERCIAL LAW**  
**CONSUMPTION**  
**MARKETS (ECONOMICS)**  
**PRICES**  
**SUPPLY AND DEMAND**

The hierarchical display reveals whether the listed narrower terms have further narrower concepts and whether there are additional broader terms between those shown and the top term. It does not display any related terms.

**ECONOMICS****TRADE****DOMESTIC TRADE****INTERNATIONAL TRADE****ECONOMIC AGREEMENTS****EXPORTS/IMPORTS****FREE TRADE****INTERNATIONAL COMPETITION****PROTECTIONISM****MARKETING****AGRICULTURAL MARKETING****SELLING****INERTIA SELLING****SALE OF PERSONAL POSSESSIONS****VENDING MACHINES****RETAIL TRADE****TRADING HOURS****WHOLESALE TRADE**

The classified listing tries to include the related terms along with the narrower/broader relationships in a subject related hierarchy.

**N65/75 TRADE \*\*****N65 COMMODITIES****N65.05 TRADE ASSOCIATIONS****N66 SUPPLY AND DEMAND****N66.10 SUPPLY****N66.40 DEMAND****N66.40.01 BUSINESS ORDERS****N67 MARKETS (ECONOMICS)****N67.40/60 MARKET STRUCTURE****N67.50 MONOPOLIES****N67.60 ECONOMIC COMPETITION****N68 CONSUMPTION****N68.10 CONSUMER GOODS****N68.10.50 SECOND-HAND GOODS****N68.20 PURCHASING****N68.20.10 SHOPPING****N68.20.10A SUNDAY SHOPPING****N68.50 SOCIOLOGY OF CONSUMPTION****N69 PRICES****N69.05 TARIFFS****N69.10 PRICE POLICY****N69.20 PRICE CONTROL****N69.30 ECONOMIC VALUE****N69.30.20 DEPRECIATION****N69.60 INFLATION****N69.60.10 DEFLATION**

An additional display, sometimes available in thesauri, is a keyword in context (KWIC) listing of all preferred terms and synonyms that contain an entered word or words from an existing preferred term or synonym. For example a KWIC listing generated from the preferred term PRICE CONTROL could display the following:-

**CONSUMER PRICE INDEX**  
**PRICE CONTROL**  
**PRICE POLICY**  
**PRODUCER PRICE INDEX**  
**RETAIL PRICE INDEX**  
**ARMS CONTROL**  
**BIOLOGICAL CONTROL**  
**BIRTH CONTROL**  
**BUDGETARY CONTROL**  
**CONTROL OF POLICE**  
**CONTROL OF THE ENVIRONMENT**  
**DRUG CONTROL**

### **3. Method**

#### **3.1 Hierarchy selection**

Selection of the initial 10 hierarchies to be included in ELSST was determined by identifying usage of thesaurus terms within the present UKDA system. However hierarchies which were already covered by existing thesauri of other domains were excluded, apart from their top terms (see 3.4), since this had been a recommendation from the requirement workshop held at the UKDA in April 2000.

An analysis of the terms linked by a related term relationship to the terms from these major 10 hierarchies resulted in the inclusion of a further 10 hierarchies.

It was initially thought that these 20 hierarchies would result in the monolingual thesaurus containing the desired target of 1,500 preferred terms.

### **3.2 Hierarchy reduction**

The following policies were adopted for the task of restructuring the UKDA HASSET for use within LIMBER. A top down reduction of the major hierarchies to a very broad base by removing any cultural or institutional bias.

Initially, it was hoped that some form of automation, using a fixed number of levels or percentage of levels, could be employed, either overall or within hierarchies in the reduction of the thesaurus. However, tests showed that these methods could not be applied and that a manual top down appraisal of each hierarchy would have to be employed.

Work started on the major 20 hierarchies, some of which contained up to 400 terms each, in order to create smaller more manageable hierarchies and to remove any cultural or institutional specific terms. These 26 reduced and restructured hierarchical listings were circulated to the user group to determine whether they met their needs.

However, the removal of cultural and institutional specific terms had resulted in a thesaurus approximately 700 terms short of our original target of 1,500 preferred terms, which we had considered the minimum required.

### **3.3 Hierarchy addition**

A recommendation from the requirement workshop was that the monolingual thesaurus should also include hierarchies to cover the elements of the DDI codebook standard that would aid determining compatibility between datasets, such as methodology and kind of data.

The expansion of three of the hierarchies, to cover these specific social science areas of the DDI codebook, was therefore carried out.

### **3.4 Top term additions**

Of the 300 hierarchies that exist in the UKDA thesaurus (HASSET) only 30 contain 50 terms or more. 20 of these had already been selected for the LIMBER thesaurus (ELSST). However, the remaining 280 hierarchies were considered important enough to included the top term of each hierarchy, so that the full potential coverage, if time and resources had allowed, could be realised. It also allows the mapping to other thesauri through the top terms (see 3.1).

### **3.5 Stand-alone term additions**

Also identified were 140 terms that, although not part of a hierarchy, still merited inclusion as stand-alone terms. Again reflecting the potential coverage of the LIMBER thesaurus.

Both these stand-alone terms and the 280 top terms had related term relationships to the terms from the 26 selected full hierarchies in ELSST. Also included were any synonyms of these additional 420 terms.

At this point in time version 1 of the monolingual version of ELSST was ready to be published. However, it was still over 300 terms short of the desired target.

### **3.5 Evaluation**

A further recommendation from the requirement workshop was that consultation with and testing by the user group community should determine whether more detail levels and additional hierarchies were required.

CESSDA (Council of European Social Science Data Archives) feedback has been a central part in the LIMBER Project's ongoing evaluation of the monolingual version of the thesaurus. CESSDA members will also be participating in two workshops, the first to be held at the IASSIST (International Association for Social Science Information Service and Technology) Conference to be held on May 15th in Amsterdam, the second at the UKDA in Colchester on July 3<sup>rd</sup>.

The response has been very positive and a substantial amount of useful comments have been received, evaluated and incorporated both on structural issues and suggested additional terms and hierarchies.

### **3.6 Additional hierarchies**

As well as minor changes to the existing hierarchies the feedback from the CESSDA archives resulted in the addition of a further 20 full hierarchies, expanded from top terms already in ELSST.

Version 2 of the monolingual ELSST resulted in 46 main hierarchies, 260 top terms, 140 stand-alone terms, 1,523 preferred terms and 868 synonyms, with 8,448 relationships between them.

## **4. Hierarchical Listings**

### **4.1 ADDICTION**

#### **ADDICTION**

- 01 ... ALCOHOLISM
- 01 ... DRUG ABUSE
- 01 ... DRUG ADDICTION
- 01 ... GAMBLING
- 01 ... SMOKING
- 01 ... SOLVENT ABUSE

### **4.2 AGE GROUPS**

#### **AGE GROUPS**

- 01 ... ADOLESCENCE
- 02 ... ... ADOLESCENTS
- 01 ... ADULTS
- 01 ... CHILDHOOD
- 02 ... ... CHILDREN
- 03 ... ... ... PRE-SCHOOL CHILDREN
