

# State Of The NeXus Data Format

Mark Könnecke

NeXus International Advisory Committee

September 26, 2012

- NeXus is a data format for X-ray and neutron scattering and muSR spectroscopy
- Solve the predicament of the travelling scientists
- Definition of a standard data format
  - Rules
  - Validation tools
- Promotion of NeXus
  - Documentation
  - NeXus API
  - Outreach to the scientific community

- Complete data for typical use
- Extendable, add additional data as you please
- Self describing
- Easy automatic plotting
- Platform independent, public domain, efficient
- Suitable for a wild variety of applications

- Physical file format and API for accessing files
  - HDF-5 for large binary data sets
  - XML for ASCII lovers
- NeXus Utilities
- Rules for storing data in files
- Dictionary of names and components to use in files (base classes)
- Validatable application specific standards as application definitions
- File hierarchies for raw and processed data

entry:NXentry

sample:NXsample

instrument:NXinstrument

source:NXsource

velocity\_selector:NXvelocity\_selector

detector:NXdetector

data[xsize,ysize], signal=1 (1)

control:NXmonitor

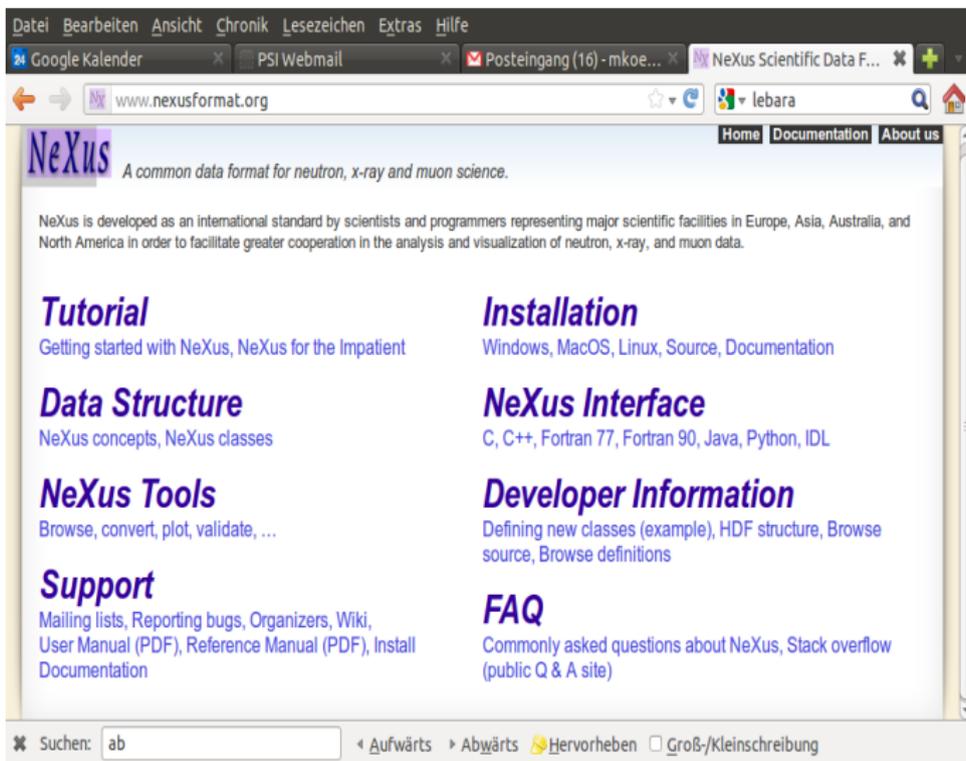

data

data:NXdata

```
entry:NXentry
  sample:NXsample
  processing_name:NXprocess
    program
    version
    parameters:NXparameter
      raw_file
  data:NXdata
    data[nx,ny,nz], signal=1
```

- Documentation and WWW-site has been revised and updated
- **NeXus for the Impatient** document
- Documented process to write NeXus files with HDF-5 alone
- NAPI Release 4.3.0, NXDL 3.1.0
- Collaboration with DECTRIS
- Collaboration with HDRI: added synchrotron beamline components
- Finalized CIF support
- Review of NeXus

The screenshot shows a web browser window with the URL [www.nexusformat.org](http://www.nexusformat.org). The browser's address bar shows several tabs: Google Kalender, PSI Webmail, Posteingang (16) - mcoe..., and NeXus Scientific Data F... The browser's search bar contains the text "lebara". The website's navigation menu includes links for Home, Documentation, and About us. The main content area features the NeXus logo and the tagline "A common data format for neutron, x-ray and muon science." Below this, a paragraph states: "NeXus is developed as an international standard by scientists and programmers representing major scientific facilities in Europe, Asia, Australia, and North America in order to facilitate greater cooperation in the analysis and visualization of neutron, x-ray, and muon data." The page is organized into two columns of links. The left column includes: **Tutorial** (Getting started with NeXus, NeXus for the Impatient), **Data Structure** (NeXus concepts, NeXus classes), **NeXus Tools** (Browse, convert, plot, validate, ...), and **Support** (Mailing lists, Reporting bugs, Organizers, Wiki, User Manual (PDF), Reference Manual (PDF), Install Documentation). The right column includes: **Installation** (Windows, MacOS, Linux, Source, Documentation), **NeXus Interface** (C, C++, Fortran 77, Fortran 90, Java, Python, IDL), **Developer Information** (Defining new classes (example), HDF structure, Browse source, Browse definitions), and **FAQ** (Commonly asked questions about NeXus, Stack overflow (public Q & A site)). At the bottom of the browser window, there is a search bar with the text "Suchen: ab" and navigation buttons for "Aufwärts", "Abwärts", "Hervorheben", and "Groß-/Kleinschreibung".

Home Documentation About us

## NeXus

*A common data format for neutron, x-ray and muon science.*

NeXus is developed as an international standard by scientists and programmers representing major scientific facilities in Europe, Asia, Australia, and North America in order to facilitate greater cooperation in the analysis and visualization of neutron, x-ray, and muon data.

### Tutorial

Getting started with NeXus, NeXus for the Impatient

### Data Structure

NeXus concepts, NeXus classes

### NeXus Tools

Browse, convert, plot, validate, ...

### Support

Mailing lists, Reporting bugs, Organizers, Wiki, User Manual (PDF), Reference Manual (PDF), Install Documentation

### Installation

Windows, MacOS, Linux, Source, Documentation

### NeXus Interface

C, C++, Fortran 77, Fortran 90, Java, Python, IDL

### Developer Information

Defining new classes (example), HDF structure, Browse source, Browse definitions

### FAQ

Commonly asked questions about NeXus, Stack overflow (public Q & A site)

Suchen: ab Aufwärts Abwärts Hervorheben Groß-/Kleinschreibung

- Essentially a bug fix release
- Unlimited dimensions for all dimensions in HDF-5
- 64 bit dimensions for really large data
- Now requires HDF-5 1.8+
- Includes alpha version of python tree API
- Much better package management support
- Now thread safe
- To be released soon after NOBUGS

- First release of suggested application definitions
- See as a foundation for community discussions
- File validation tool
- Contains the updated NeXus reference manual
- Available at:  
<http://download.nexusformat.org/kits/definitions/>

- Manufactures the Pilatus and upcoming EIGER detectors for X-rays
- Expected EIGER data rates of 5-10GB/sec blow lid of old data formats
- Working towards NeXus/HDF-5
- Programming model:
  - Detector SW writes what it knows into NXentry/NXdetector structures
  - Local DAQ system adds meta data
- NXdetector base class extended to cover pixel detectors
- DECTRIS is paying HDF group to develop:
  - Dynamically loadable filters
  - Storing precompressed data blocks
- The NIAC is committed to make this fly

# Finalized CIF-NeXus Mapping Support

- Added features to NeXus to allow full mapping between CIF and NeXus
- Consequences:
  - There will be negotiations with the IUCR about a possible merger between NeXus and CIF
  - Herbert Bernstein promised to add NeXus/HDF-5 support to CBFlib
- The NIAC is in support of both moves

- NeXus around for 16 years
- Apparently slow uptake
- However: people starting on their own gravitate to something which looks like NeXus in the long run
- The NIAC reviewed NeXus on the basis of a questionnaire sent out before the last NIAC Meeting

- Soleil: 20 out of 26 instruments do NeXus, 2 mill files
- PSI-SINQ: 11 from 16 instrument on NeXus, 1.4 Mill files
- Lujan/LANL: 11 instruments, no change, 1 million files
- ANSTO: 7 going to 10
- KEK: 10, 6 planned
- SNS: 14,3 in the pipeline
- DESY: 0, 11 in 2 Jahren
- Diamond: 7 NeXus only, 17 writing, moving to 18 as primary format
- ISIS: 8 using, 20 writing, planned: 20 using
- **Less intense users:**
- PSI-SLS: 2 planned,
- ESRF: 2 beamlines, limited to NXentry, NXcollection, NXdata, moving to 4
- HZB: 3 Neutron, 1 synchrotron, 3 planned
- Muons: 4 instruments

- Base classes, dictionary, application definitions most important
- NIAC is a forum to resolve issues around these
- NIAC acts a custodian
- Validation is important and will continue to be developed

- NAPI: stable and in maintenance mode
- We encourage people to write NeXus files with HDF-5 tools
- Pedro Vincente contributed a minimal helper tool on top of H5L for this
- We accept application definitions with a flatter hierarchy from the community

- NeXus has matured considerably over the course of time
- Everything in NeXus is there for a reason, often compiled from differing and conflicting requirements
- NeXus is inclusive
- NeXus is used
- NeXus does not require you to store lots of useless information
- NeXus allows to define and validate real standards
- NeXus is not restricted to binary formats

- NeXus is used a lot
- NeXus adds meaning to HDF-5
- Planned:
  - Collaboration with DECTRIS
  - Collaboration with IUCR
  - Review of NeXus base classes and introduction of OO concepts
  - Look into how to store generalized time stamped data
- Please join or interact with the NIAC when trying to define a standard
- Get yourself heard: there are still facilities with no representative in the NIAC
