$\forall u \in \mathcal{H} \quad u=\sum_{i=1}^{N} u_{i} \psi_{i} \quad u_{i} \in \mathbf{R} \quad i=1, \ldots, N$
- Representation of scalar product in $\mathrm{R}^{N}$.

Let $u=\sum_{i=1}^{N} u_{i} \psi_{i}$ and $v=\sum_{i=1}^{N} v_{i} \psi_{i}$.
Then

$$
(u, v)=\sum_{i=1}^{N} \sum_{j=1}^{N} u_{i} v_{j}\left(\psi_{i}, \psi_{j}\right)=\mathbf{v}^{\top} \mathbf{H} \mathbf{u}
$$

where $\mathbf{H}_{i j}=\mathbf{H}_{j i}=\left(\psi_{i}, \psi_{j}\right)$ and $\mathbf{u}, \mathbf{v} \in \mathbf{R}^{N}$.
Moreover, $\mathbf{u}^{T} \mathbf{H u}>0$ iff $\mathbf{u} \neq 0$ and, thus $\mathbf{H}$ SPD.

## Preconditioners for the Steklov-Poincaré operator

Let $\Omega$ be an open subset of $\mathbf{R}^{d}$ with boundary $\partial \Omega$ and consider the model problem

$$
\left\{\begin{array}{rlrl}
-\Delta u & =f & & \text { in } \Omega \\
u=0 & & \text { on } \partial \Omega .
\end{array}\right.
$$

Given a partition of $\Omega$ into two subdomains $\Omega \equiv \Omega_{1} \cup \Omega_{2}$ with common boundary $\Gamma$ this problem can be equivalently written as

$$
\left\{\begin{array} { r l } 
{ - \Delta u _ { 1 } = f } & { \text { in } \Omega _ { 1 } , } \\
{ u _ { 1 } = 0 } & { \text { on } \partial \Omega _ { 1 } \backslash \Gamma , }
\end{array} \quad \left\{\begin{array}{rl}
-\Delta u_{2}=f & \text { in } \Omega_{2}, \\
u_{2}=0 & \text { on } \partial \Omega_{2} \backslash \Gamma,
\end{array}\right.\right.
$$

with the 'interface conditions'

$$
\left\{\begin{aligned}
u_{1} & =u_{2} \\
\frac{\partial u_{1}}{\partial n_{1}} & =-\frac{\partial u_{2}}{\partial n_{2}}
\end{aligned} \quad \text { on } \Gamma\right.
$$

## Preconditioners for the Steklov-Poincaré operator

Given $\lambda_{1}, \lambda_{2} \in H_{00}^{1 / 2}(\Gamma), \psi_{1}, \psi_{2}$ denote the harmonic extensions of $\lambda_{1}, \lambda_{2}$ respectively into $\Omega_{1}, \Omega_{2}$, i.e., for $i=1,2, \psi_{i}$ satisfy

$$
\left\{\begin{aligned}
-\Delta \psi_{i} & =0 & & \text { in } \Omega_{i}, \\
\psi_{i} & =\lambda_{i} & & \text { on } \Gamma, \\
\psi_{i} & =0 & & \text { on } \partial \Omega_{i} \backslash \Gamma .
\end{aligned}\right.
$$

The Steklov-Poincaré operator $\mathscr{S}: H_{00}^{1 / 2}(\Gamma) \rightarrow H^{-1 / 2}(\Gamma)$

$$
\begin{gathered}
\left\langle\mathscr{S} \lambda_{1}, \lambda_{2}\right\rangle_{H^{1 / 2}(\Gamma)}=\left\langle\nabla \psi_{1}, \nabla \psi_{2}\right\rangle_{L^{2}(\Omega)}=: s\left(\lambda_{1}, \lambda_{2}\right) . \\
c_{1}\|\lambda\|_{H^{1 / 2}(\Gamma)}^{2} \leq s(\lambda, \lambda) \leq c_{2}\|\lambda\|_{H^{1 / 2}(\Gamma)}^{2} .
\end{gathered}
$$

## Preconditioners for the Steklov-Poincaré operator

$$
\begin{aligned}
& \text { (i) }\left\{\begin{aligned}
-\Delta u_{i}^{\{1\}} & =f \text { in } \Omega_{i}, \\
u_{i}^{\{1\}} & =0 \text { on } \partial \Omega_{i},
\end{aligned}\right. \\
& \text { (ii) }\left\{\begin{aligned}
\mathscr{S} \lambda=- & \frac{\partial u_{1}^{\{1\}}}{\partial n_{1}}-\frac{\partial u_{2}^{\{1\}}}{\partial n_{2}}
\end{aligned} \text { on } \Gamma,\right. \\
& \text { (iii) }\left\{\begin{aligned}
-\Delta u_{i}^{\{2\}} & =0 \text { in } \Omega_{i}, \\
u_{i}^{\{2\}} & =\lambda \text { on } \partial \Omega_{i} .
\end{aligned}\right.
\end{aligned}
$$

The resulting solution is

$$
\left.u\right|_{\Omega_{i}}=u_{i}^{\{1\}}+u_{i}^{\{2\}} .
$$

## An other problem

$$
\left\{\begin{aligned}
-\nu \Delta u+\vec{b} \cdot \nabla u & =f & & \text { in } \Omega \\
u & =0 & & \text { on } \partial \Omega

$$
\mathcal{V}^{h}=\mathcal{V}^{h, r}:=\left\{w \in C^{0}(\Omega):\left.w\right|_{\mathfrak{t}} \in P_{k} \quad \forall \mathfrak{t} \in \mathfrak{T}_{h}\right\} \subset H^{1}(\Omega)
$$

be a finite-dimensional space of piecewise polynomial functions defined on some subdivision $\mathfrak{T}_{h}$ of $\Omega$ into simplices $\mathfrak{t}$ of maximum diameter $h$. Let further $\mathcal{V}_{l}^{h}, \mathcal{V}_{B}^{h} \subset \mathcal{V}^{h}$ satisfy $\mathcal{V}_{l}^{h} \oplus \mathcal{V}_{B}^{H} \equiv \mathcal{V}^{h}$ where $\mathcal{V}_{l}^{h}=\left\{w \in \mathcal{V}^{h}:\left.w\right|_{\partial \Omega}=0\right\}$. Let $\mathcal{X}_{h} \subset H_{0}^{1}(\Gamma)$ denote the space spanned by the restriction of the basis functions of $\mathcal{V}_{l}^{h}$ to the internal boundary $\Gamma$.

## Discrete Formulation

(i) $\quad \mathbf{A}_{l /, i} \mathbf{u}_{i}^{\{1\}}=\mathbf{f}_{l, i}$,
(ii) $\quad \mathbf{S} \mathbf{u}_{B}=\mathbf{f}_{B}-\mathbf{A}_{I B, 1}^{T} \mathbf{u}_{1}^{\{1\}}-\mathbf{A}_{I B, 2}^{T} \mathbf{u}_{2}^{\{2\}}$,
(iii) $\quad \mathbf{A}_{I /, i} \mathbf{u}_{i}^{\{2\}}=-\mathbf{A}_{I B, 1}^{T} \mathbf{u}_{B}-\mathbf{A}_{I B, 2}^{T} \mathbf{u}_{B}$,
where $\mathbf{S}$ is the Schur complement corresponding to the boundary nodes

$$
\mathbf{S}=\mathbf{S}_{1}+\mathbf{S}_{2}, \quad \mathbf{S}_{i}=\mathbf{A}_{B B, i}-\mathbf{A}_{l B, i}^{T} \mathbf{A}_{I I, i}^{-1} \mathbf{A}_{I B, i}
$$

The resulting solution is $\left(\mathbf{u}_{l, 1}, \mathbf{u}_{l, 2}, \mathbf{u}_{B}\right)$ where

$$
\mathbf{u}_{l, i}=\mathbf{u}_{i}^{\{1\}}+\mathbf{u}_{i}^{\{2\}} .
$$

## $H_{00}^{1 / 2}$-preconditioners

Let $\mathcal{X}_{h}=\operatorname{span}\left\{\phi_{i}, 1 \leq i \leq m\right\}$ be defined as above and let $\left(\mathbf{L}_{k}\right)_{i j}=\left\langle\phi_{i}, \phi_{j}\right\rangle_{H_{0}^{k}(\Gamma)}$ for $k=0,1$. Let

$$
\mathbf{H}_{1 / 2}:=\mathbf{L}_{0}\left(\mathbf{L}_{0}^{-1} \mathbf{L}_{1}\right)^{1 / 2}
$$

Then for all $\boldsymbol{\lambda} \in \boldsymbol{R}^{m} \backslash\{\mathbf{0}\}$

$$
\kappa_{1} \leq \frac{\lambda^{T} \mathbf{S} \boldsymbol{\lambda}}{\lambda^{T} \mathbf{H}_{1 / 2} \boldsymbol{\lambda}} \leq \kappa_{2}
$$

with $\kappa_{1}, \kappa_{2}$ independent of $h$.

## Discrete DD and Preconditioning

$$
\mathbf{P}=\left(\begin{array}{cc}
\mathbf{A}_{I I} & \mathbf{A}_{I B} \\
0 & \mathbf{P}_{S}
\end{array}\right)
$$

with $\mathbf{A}_{/ /}=\nu \mathbf{L}_{/ /}+\mathbf{N}_{/ /}$where $\mathbf{L}_{/ /}$is the direct sum of Laplacians assembled on each subdomain and $\mathbf{N}_{/ /}$is the direct sum of the convection operator $\vec{b} \cdot \nabla$ assembled also on each subdomain. With $P_{S}$ we denote the approximation of $\mathbf{H}_{00}^{1 / 2}$ by a vector or of $\mathbf{H}^{-1 / 2}$ by a vector. Then we use FGMRES.

## Summary

- Interpolation spaces produce dense matrices i.e. non-local operators BUT we can compute everything using SPARSE LINEAR ALGEBRA
- Interpolation spaces are not only useful in DD
- Link with integro-differential operator such as Riemann-Liouville fractional derivative (M.Riesz 1938,1949).
- In modelling complex phenomena the use of non-local operators is a new promising subject attracting increasing attention.
- Other areas of application that are worth to mention include: BEM and image processing (filtering):
