## INTRODUCTION

Editions of the SPC Tuna Fishery Yearbook for 1992–1997 presented catch statistics for the SPC Statistical Area, which encompasses the exclusive economic zones (EEZs) of SPC member countries and territories and the adjacent high seas. Starting with the edition of the Yearbook for 1998, the tables were modified to present catch statistics for the Western and Central Pacific Ocean (WCPO). The WCPO Area (Figure 1) was established for statistical purposes at the Twelfth Meeting of the Standing Committee on Tuna and Billfish, 16–23 June 1999, Tahiti, French Polynesia (Anon. 1999).

The present document covers tuna fisheries in the WCPO from 1950 to 2003. The tables of catch statistics cover the four main commercial species caught in the WCPO: albacore (*Thunnus alalunga*), bigeye (*Thunnus obesus*), skipjack (*Katsuwonus pelamis*) and yellowfin (*Thunnus albacares*). Catches of other species, e.g. billfish, are not covered explicitly, and discards are not considered. Historical statistics have been revised as new information has been made available. Statistical tables covering individual fleets are followed by tables summarising the numbers of vessels, catches by species and gear type in the WCPO, and catches by species and ocean areas. The summary tables were developed for use by the Standing Committee on Tuna and Billfish.

The industrial fishing methods employed in the WCPO include longline, pole-and-line, purse seine and troll. Two types of longline are considered: distant-water longlining, which is conducted by large, freezer-equipped vessels that make trips of up to several months' duration, and offshore longlining, which is conducted by small vessels that make trips of usually less than two weeks' duration. Drift net fishing for albacore in the South Pacific Ocean ceased in 1991. Estimates for small-scale fisheries have been included where available. The tables of annual catch statistics for each fleet are accompanied by histograms showing annual catches and by maps of fishing effort in the most recent year for which data are available.

The sources of data are listed below. If not stated explicitly, the government agencies referenced in the notes are agencies of the fishing nation covered in the table. Whenever possible, the annual catch estimates were obtained from the governments of the fishing nations; however, many of the statistics are from other sources. When no other statistics were available, an attempt was made to estimate catches from information held at SPC. Extensive use was made of catch and effort logsheet data and unloading data held at SPC, which have been provided by SPC member countries and territories from both domestic and foreign fleets operating in their EEZs. Maps depicting the distribution of fishing effort were produced from logsheet data held at SPC, except for the Japanese longline, pole-and-line and purse-seine fleets, the Korean longline fleet, the Chinese Taipei distant-water longline fleet and the United States longline (based in Hawaii and California) and troll fleets, for which maps were produced from data grouped by time–area strata provided by the fishing nations.

The tables for individual fleets cover those years during which the fleet is known to have fished; the lack of recent years in a table implies that the fleet has ceased fishing. Catches are reported in whole weights. Zero catches because of no fishing effort are represented by a hyphen. Zero catches with positive effort are represented by a zero. Catches greater than zero but less than half a tonne are represented by a plus sign. Missing values are represented by an ellipsis, and values carried over from previous years are given in parentheses.

Caution should be used in interpreting the statistics presented herein; in particular, most estimates for 2003 should be considered as preliminary.

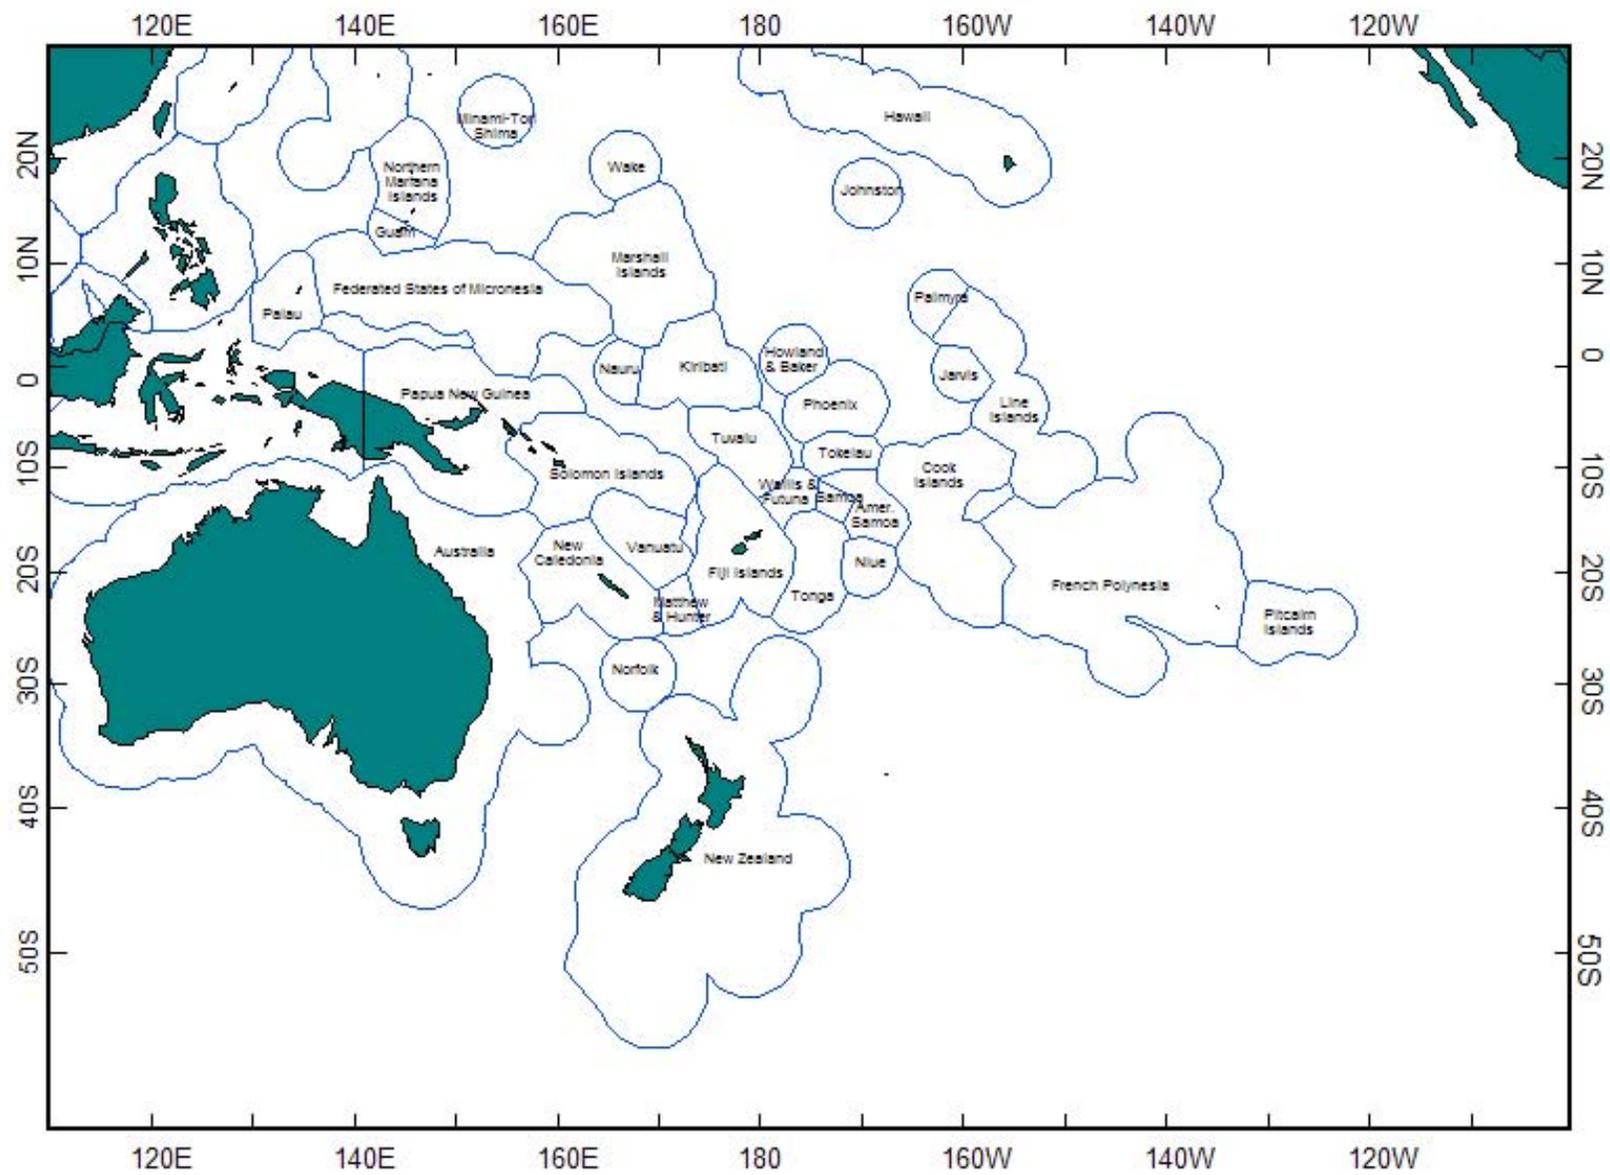

Figure 2. Approximate 200 mile zones

## SOURCES OF ESTIMATES

### DRIFT NET

- Japan Albacore: All estimates were taken from Matsunaga & Uozumi (1996).
- Republic of Korea Albacore: The estimate for 1989 was provided by the National Fisheries Administration of the Republic of Korea (Kim, pers. comm., June 1989).
- Chinese Taipei Albacore: The estimate for 1988 was provided to SPC by an industry source. The estimate for 1989 was determined from catch and effort data provided by the Tuna Research Center, National Taiwan University (Hsu, pers. comm., January 1991). The estimates for 1990–1991 were taken from Wang (1991). All estimates are for the fishing year, August–July; catches were allocated to the year in which the fishing year ended.

### LOGLINE

- American Samoa Vessels, Albacore, Bigeye and Yellowfin: The numbers of vessels and catch estimates for 1988–1996 were provided by the National Marine Fisheries Service (Skillman, pers. comm., June 2002). The numbers of vessels and catch estimates for 1997 were taken from Ito et al. (2002). The numbers of vessels and catch estimates for 1998–2003 were provided by the National Marine Fisheries Service (Skillman, pers. comm., May 2004). CPUE estimates were determined from data held at SPC.
- Australia Vessels, Albacore, Bigeye and Yellowfin: All statistics for 1985 were determined from information provided by the Bureau of Rural Sciences (BRS) (Ward, pers. comm., June 1997). All statistics for 1986–2001, except CPUE, were determined from information provided in Findlay & Bromhead (2002); bigeye and yellowfin catch estimates for 1986–2001 have been converted from processed weights to whole weights using conversion factors of 1.131 for bigeye and 1.166 for yellowfin. CPUE estimates for 1985–2000 were provided by BRS (Robins, pers. comm., August 2001); CPUE estimates for 2001 were determined from data held at SPC. All estimates for 2002, except the number of vessels active and the catch of ‘other’ species, were provided by BRS (Bromhead, pers. comm., May 2003); the number of vessels active was taken from Bromhead & Findlay (2003); the catch of ‘other’ species was determined from logsheet data held by SPC. All estimates for 2003 were provided by BRS (Bromhead, pers. comm., April 2004, May 2004).
- Australia–Japan joint venture Vessels, Albacore, Bigeye and Yellowfin: All statistics were determined from information provided by the Bureau of Rural Sciences (Ward, pers. comm., June 1997, May 1998). The catch estimates have been converted from dressed weights to whole weights using conversion factors of 1.131 for bigeye and 1.166 for yellowfin.
- China Vessels, Albacore, Bigeye and Yellowfin: All estimates for 1988–1998 were determined from logsheet and landings data held at SPC; catches were allocated to the year in which the trip ended. The numbers of hooks for 2000–2001 were taken from Xu (2002). The number of vessels active and catch estimates for 1999–2003 were taken from Song et al. (2004). The map of catches taken in 2002 does not cover vessels targeting albacore at higher latitudes.

**LONGLINE continued**

- Cook Islands** Vessels, Albacore, Bigeye and Yellowfin: The number of vessels and catch estimates for 1994–1995 were determined from logsheet and landings data held at SPC; catches were allocated to the year in which the trip ended. Estimates of the number of vessels and catches for 1996 were provided by the Ministry of Marine Resources (Mitchell, pers. comm., May 1998). The number of vessels for 1998 was taken from Mitchell (1999). The number of vessels for 1999 was taken from Mitchell (2000). Catch estimates for 2002 were taken from Mitchell (2003). The number of vessels and catch estimates for 2002–2003 were taken from Marurai (2004). All estimates of CPUE were determined from logsheet data held at SPC.
- Fed. States of Micronesia** Vessels, Albacore, Bigeye and Yellowfin: All estimates were determined from logsheet and landings data held at SPC; catches were allocated to the year in which the trip ended.
- Fiji Islands** Vessels, Albacore, Bigeye and Yellowfin: The number of vessels active and catches for 1989 were estimated from landings data, logsheet data and port sampling data held at SPC. Estimates for 1990–1992 were taken from Sharma (1993). The number of vessels active and catches for 1993 were provided by the Fiji Fish Company Ltd (Saheb, pers. comm., May 1994) and by the Pacific Fishing Company Ltd (Kumar, pers. comm., April 1994). The number of vessels and catch estimates for 1994 were taken from Tuwai (1999). The number of vessels and catch estimates for 1995–1996 were taken from Tuwai (2000). The number of vessels and catch estimates for 1997 were taken from Amoe (2002). The number of vessels and catch estimates for 1998 were taken from Amoe (2003). The number of vessels and catch estimates for 1999–2003 were taken from Amoe (2004); the number of vessels represents licensed vessels. The catch estimates for 1997–1999 have not been raised to account for missing data. The estimate of the catch of ‘other’ species for 1992 was based on observer data; estimates for other years are based on landings data and logsheet data. These statistics include joint ventures with Australia, Korea, New Zealand, Chinese Taipei and the United States, but not chartered Chinese Taipei distant-water longliners or United States longliners fishing as foreign vessels. CPUE estimates were determined from logsheet data held at SPC.
- French Polynesia** Vessels, Albacore, Bigeye and Yellowfin: All estimates for 1990–1995 were provided by the Service des Ressources Marines (Stein, pers. comm., May 2003). The number of vessels and catch estimates for 1996 were taken from Misselis (2003). The number of vessels and catch estimates for 1997–2003 were taken from Ponsonnet (2004). Catches to the east of 150°W have been included. These statistics cover all longliners, including coastal longliners (*palangriers côtiers*), offshore longliners (*palangriers hauturiers*) and converted *bonitiers*. The catch estimates cover discards.
- Indonesia** Vessels: All estimates were provided by the Research Institute for Marine Fisheries (Naamin, pers. comm. to Coan, 1997).
- Bigeye: All estimates were determined by adjusting estimates of yellowfin catches for the inclusion of bigeye; the proportion of bigeye in the catch of yellowfin was estimated as 8.6 per cent (Hampton et al. 1996). For the sources of the unadjusted estimates of yellowfin, see ‘Yellowfin’ below.
- Yellowfin: Estimates for 1978–1981, 1983 and 1988–1989 were provided by the Research Institute for Marine Fisheries (Naamin, pers. comm. to Coan, 1997). Estimates for 1982, 1984–1987 and 1990 were taken from Indo-Pacific Tuna Programme (1991a, 1991b) for Area F71. Estimates for 1991–2002 were determined from information provided by the Data and Statistic Sub Directorate of the Directorate General of Capture Fishery (Muranto, pers. comm., May 1993; Naamin, pers. comm., August 1995; Retnowati, pers. comm., June 2003). All estimates were adjusted for the inclusion of bigeye; the proportion of bigeye in the catch of yellowfin was estimated as 8.6 per cent (Hampton et al. 1996).

**LONGLINE continued**

- Japan, coastal Vessels: Estimates for 1953–2002 were taken from Miyabe et al. (2004).  
Bigeye and Yellowfin: Estimates of yellowfin catches for 1952–1968 were taken from Anon. (1980). Estimates of bigeye and yellowfin catches for 1969 were provided by the National Research Institute of Far Seas Fisheries (Miyabe, pers. comm., July 2003). Estimates of bigeye and yellowfin catches for 1970–2002 were taken from Miyabe et al. (2004).
- Japan, offshore/distant-water Vessels: Estimates for 1953–2003 were taken from Miyabe et al. (2004). The numbers of distant-water vessels are for all oceans.  
Albacore in the WCPO (Table 9), Bigeye and Yellowfin: All estimates for 1952–1961 were determined from catch and effort data, grouped by 5° latitude, 5° longitude and month, provided by the Fisheries Agency of Japan. All estimates for 1962–1969, except estimates of the catch of other species and CPUE, were provided by the National Research Institute of Far Seas Fisheries (Miyabe, pers. comm., July 2003); estimates of the catch of other species and CPUE were determined from catch and effort data, grouped by 5° latitude, 5° longitude and month, provided by the Fisheries Agency of Japan. All estimates for 1970–2003, except the catch of other species and CPUE during 1970–1997, were taken from Miyabe et al. (2004); estimates of the catch of other species and CPUE were determined from catch and effort data, grouped by 5° latitude, 5° longitude and month, provided by the Fisheries Agency of Japan. The catch data provided by the Fisheries Agency of Japan are given in numbers of fish; these were converted to tonnes by the OFP.  
Albacore in the South Pacific Ocean (Table 68): Estimates for 1952–1969 were taken from Matsunaga & Uozumi (1996). Estimates for 1970–2001 were provided by the National Research Institute of Far Seas Fisheries (Miyabe, pers. comm., May 1999, June 2000, July 2003).
- Kiribati Vessels, Bigeye and Yellowfin: All estimates for 1995–1996 were determined from logsheet and landings data held at SPC. The number of vessels and catch estimates for 2000–2003 were taken from Awira (2004).
- Marshall Islands Vessels, Albacore, Bigeye and Yellowfin: All estimates were determined from logsheet and landings data held at SPC; catches were allocated to the year in which the trip ended.
- Nauru Vessels, Albacore, Bigeye and Yellowfin: The numbers of vessels for 2000–2003 and catch estimates for 2003 were taken from Jacob (2004).
- New Caledonia Vessels, Albacore, Bigeye and Yellowfin: Estimates for 1983–1986 were determined from logsheet data held at SPC. All estimates except CPUE for 1987–1991 were provided by the Service de la Marine Marchande et des Pêches Maritimes (Etaix-Bonnin, pers. comm., June 1991, April 1992, March 1994). All estimates except CPUE for 1992 were taken from Etaix-Bonnin (1997). All estimates except CPUE for 1993–1995 were taken from Marine Marchande (1998). All estimates except CPUE for 1996–2000 were taken from Etaix-Bonnin (2001). All estimates except CPUE for 2001 were taken from Etaix-Bonnin (2002). All estimates except CPUE for 2002 were taken from Etaix-Bonnin (2003). All estimates except CPUE for 2003 were provided by the Service de la Marine Marchande et des Pêches Maritimes (Etaix-Bonnin, pers. comm., March 2004). All CPUE estimates were determined from logsheet data held by SPC. Estimates for 1983–1995 for bigeye and yellowfin have been converted by SPC from processed to whole weights using the factor of 1.12 recommended by the Marine Marchande (Etaix-Bonnin, pers. comm., April 1999). Estimates for 2003 were converted by the Marine Marchande from gilled-and-gutted, steak and filet weights to whole weights using the factors of 1.13, 1.30 and 2.00 respectively.

**LONGLINE continued**

- New Zealand Vessels: Estimates for 1989–2002 were provided by the National Institute of Water and Atmospheric Research (NIWA) (Murray, pers. comm., June 2002, June 2003). Estimates for 2003 were provided by the Ministry of Fisheries (Murray, pers. comm., May 2004).
- Albacore, Bigeye and Yellowfin: Estimates for 1987–1988 were taken from Murray et al. (2000). These estimates are for the fishing year, October–September. Estimates for 1989 were taken from Murray and Griggs (2001). Catch estimates for 1990–2001 were taken from Murray et al. (2002). Catch estimates for 2002–2003 were taken from Kendrick et al. (2004); estimates for ‘other’ species for 2002–2003 include skipjack, Pacific bluefin, southern bluefin and swordfish only.
- Palau Vessels, Albacore, Bigeye and Yellowfin: All estimates were determined from logsheet and landings data held at SPC; catches were allocated to the year in which the trip ended.
- Papua New Guinea Vessels, Albacore, Bigeye and Yellowfin: According to observer data provided by the Australian Fisheries Management Authority, one vessel flagged in Papua New Guinea fished in Australia in 1991. All estimates for 1993 were determined from logsheet data held at SPC. All estimates for 1994 were determined from logsheet data held at SPC and from statistics provided by the National Fisheries Authority (Kumoru, pers. comm., June 1995). The number of vessels and an estimate of the total catch for 1995 were provided by an industry source; the species composition was determined from logsheet statistics provided by the National Fisheries Authority (Robinson, pers. comm., June 1997). All estimates, except the catch of albacore and CPUE, for 1996 were determined from logsheet and export statistics provided by the National Fisheries Authority (Robinson, pers. comm., June 1997). The estimate of the albacore catch for 1996 was determined from logsheet data held by SPC. The numbers of vessels for 1997 were taken from Kumoru (2002). Catch estimates for 1997 were determined from logsheet and landings data held at SPC. CPUE estimates for 1993–1997 were determined from logsheet data held by SPC. All estimates for 1998–2002 were taken from Kumoru & Lewis (2003); the numbers of vessels are those licensed; not all vessels may have been active; the catch estimates for tuna, but not ‘other’, were raised on the basis of coverage rates in Table 6 of that report. All estimates for 2003 were taken from Kumoru (2004); the numbers of vessels are those licensed.
- Philippines Vessels: Estimates for 1982–1996 were provided by the Bureau of Fisheries and Aquatic Sciences (Ganaden, pers. comm. to Coan, 1997). Estimates for 1998–2000 were taken from Barut (2003). The estimates represent the number of vessels licensed.
- Bigeye and Yellowfin: All estimates for 1970–1996 were taken from Lawson and Williams (1998). Estimates of the catch of skipjack and the combined catch of yellowfin and bigeye for 1997 were provided by the Bureau of Agricultural Statistics (Lingbawan, pers. comm., May 1999). Estimates of the catch of skipjack and the combined catch of yellowfin and bigeye for 1998–2000 were taken from Barut (2003). Estimates of the catch of skipjack and the combined catch of yellowfin and bigeye for 2001–2003 were provided by the Bureau of Agricultural Statistics (Amandy, pers. comm., May 1999). Catches by species were estimated using the method in Lawson & Williams (1998) and the proportions by gear type for 1996.
- Republic of Korea Vessels: Estimates for 1958–1969 were taken from Wetherall & Yong (1986). Estimates for 1970–1974 were provided by the National Fisheries Research and Development Institute (NRFDI) (Lee, pers. comm. to Coan, 1997). Estimates for 1975–1997 were taken from Koh (2001). The estimate for 1998 was taken from Koh et al. (2003). Estimates for 1999–2003 were taken from Yang et al. (2004). The numbers of vessels are for the whole Pacific Ocean.

**LONGLINE continued**

Albacore in the WCPO (Table 11), Bigeye and Yellowfin: Estimates for 1958–1974 were taken from Wetherall and Yong (1986); these estimates represent landings at Pago Pago, American Samoa. All statistics for 1975–1996 were taken from Koh (2001). Catch estimates for 1997 were taken from Koh et al. (2002). Catch estimates for 1998 were taken from Koh et al. (2003). Catch estimates for 1999–2003 were taken from Yang et al. (2004). CPUE estimates for 1997–2001 were determined from data provided by NFRDI, grouped by 5° latitude and 5° longitude.

Albacore in the South Pacific Ocean (Table 68): Estimates for 1958–1975 were taken from Wetherall et al. (1979); these estimates include some catch from the North Pacific. Estimates for 1976–1993 were determined by multiplying the catch in numbers of fish reported on logbooks for the SPAR area by average weights, and dividing by coverage rates; the catches in numbers of fish were determined from data provided by NFRDI, grouped by 5° latitude and 5° longitude. The average weights for 1976–1987 were taken from National Fisheries Research and Development Agency (1980, 1981, 1985, 1986, 1988, 1990), while those for 1988–1993 were estimated from logbook data held at SPC. Coverage rates for 1976–1991 were taken from Lee et al. (1997). Coverage rates for 1992–1993 were assumed to be 100 per cent; these estimates should therefore be considered as minimum estimates. Estimates for 1994–1997 were provided by the NFRDI (Hwang, pers. comm., May 1998; Moon, pers. comm., June 1999). All statistics for 1998–2000 were provided by the NFRDI (Koh, pers. comm., July 2001).

## Samoa

Vessels, Albacore, Bigeye and Yellowfin: The number of vessels and catch estimates for 1993 were taken from Mulipola & Fa'asili (1999). The number of vessels and catch estimates for 1994–1995 were taken from Mulipola (2000). The number of vessels and catch estimates for 1996–2000 were taken from Su'a & Watt (2001). An estimate of the total catch for 2001 were provided by the Fisheries Division (Mulipola, pers. comm., March 2002); the average species composition during 1993–2000 was used for 2001. The number of vessels for 2001–2003 and catch estimates for 2002–2003 were taken from Imo et al. (2004).

## Solomon Islands

Vessels, Albacore, Bigeye and Yellowfin: The numbers of vessels for 1973–1980 were taken from Anon. (1985). Catch estimates for 1973–1980 were determined from total catch estimates in Anon. (1985); the species composition was estimated by applying the average species composition for 1981–1985, determined from logsheet data held at SPC. The number of vessels and the total catch for 1981–1982 were taken from Anon. (1985); the species composition for 1981–1982 was determined from logsheet data held at SPC. The number of vessels and catch estimates for 1983–1985 were determined from logsheet data held at SPC. All estimates, except CPUE, for 1995–1997 were taken from Oreihaka (2001). All estimates, except CPUE, for 1998–1999 were taken from Oreihaka (2002). All estimates, except CPUE, for 2000–2003 were taken from Oreihaka (2004). CPUE estimates for 1995–2003 were determined from logsheet data held at SPC.

**LONGLINE continued**

Chinese Taipei,  
offshore, foreign ports

Vessels, Bigeye and Yellowfin: Catches for 1990 were estimated from landings statistics provided by the Guam Department of Commerce (Harris, pers. comm., June 1991) and the Palau Maritime Authority. Catches for 1991 were estimated from landings statistics provided by the Guam Department of Commerce (Fitzgerald, pers. comm., June 1992), the Palau Maritime Authority (Rechebei, pers. comm., June 1992) and the Micronesian Maritime Authority. The catch estimates for 1991 cover transshipments in Guam, Koror and Pohnpei (Federated States of Micronesia); transshipments in Majuro (Marshall Islands) and Yap (Federated States of Micronesia) have been ignored. Catches for 1992 were estimated from landings statistics provided by the Guam Department of Commerce (Harris, pers. comm., April 1993), the Micronesian Maritime Authority, the Marshall Islands Marine Resources Authority, and Ting Hong (Yap) Co. (Chiu, pers. comm., January 1993). All estimates for 1993–1996 and the numbers of vessels for 1997–2000 were estimated from landings data, logsheet data and port sampling data held at SPC. Catch estimates for 1997–2001 were taken from Wang et al. (2002). Catch estimates for 2002 were provided by the Overseas Fisheries Development Council (Chang, pers. comm., June 2003). Catch estimates for 2003 were provided by the Fisheries Agency (Tsai, pers. comm., July 2004). The estimates for 2001–2003 represent landings in foreign ports in the Pacific region and may include catches from other ocean areas.

Chinese Taipei,  
offshore, domestic

Vessels, Bigeye and Yellowfin: Estimates of yellowfin catches for 1954–1963 were taken from Anon. (1980). Estimates of yellowfin catches for 1964–1969 were determined by subtracting distant-water longline catches from estimates of catches for the whole Pacific Ocean taken from Anon. (1980). Estimates for 1970–1995 were provided by National Taiwan University (Sun, pers. comm. to Coan, 1997). Estimates for 1996 were taken from Wang & Kuo (2001). Estimates for 1997 were taken from Wang et al. (2002). Estimates for 1998 were taken from Anon. (2003). Estimates for 1999–2003 were taken from Anon. (2004). The estimates for 1996–2003 represent landings in domestic ports and may include catches from other ocean areas.

Chinese Taipei,  
distant-water

Vessels: Estimates for 1975–1992 were provided by National Taiwan University (Sun, pers. comm. to Coan, 1997); the numbers of vessels are for the whole Pacific Ocean. Estimates for 1993–1997 were taken from Chang & Lu (1998). Estimates for 1998–2003 were provided by the Overseas Fisheries Development Council (Wang, pers. comm., June 2000, August 2001, June 2002; Chang, pers. comm., May 2003, May 2004).

Albacore, Bigeye and Yellowfin in the WCPO (Table 21): Catch estimates for 1963–1966 were taken from Wetherall et al. (1979). All estimates for 1967–1993 were determined from logsheet data grouped by 5° longitude, 5° latitude and month, provided by National Taiwan University (Hsu, pers. comm., September 1993, May 1994, August 1995); the aggregated data were corrected for albacore landings by SPC using the method presented in Lawson (1997). All estimates for 1994–1995 were determined from logsheet data grouped by 5° longitude, 5° latitude and month, provided by the Overseas Fisheries Development Council (OFDC); these aggregated data were corrected for albacore landings by OFDC. Catch estimates for 1996–1998 were provided by the Overseas Fisheries Development Council (Chang, pers. comm., May 2003). Bigeye and yellowfin catch estimates for 1999–2003 were taken from Anon. (2004); the albacore catch estimates for 1999–2002 were provided by the Overseas Fisheries Development Council (Chang, pers. comm., May 2003) and the albacore catch estimate for 2003 was estimated as the product of the catch in the whole Pacific Ocean (Tsai, pers. comm., April 2004) and the average proportion taken in the WCPO during 1999–2001. Catches of ‘other’ for 1996–2003 represent billfish and skipjack.

Albacore in the South Pacific Ocean (Table 68): Catch estimates for 1963–1966 were taken from Wetherall et al. (1979). All estimates for 1967–1998 were determined from logsheet data grouped by 5° longitude, 5° latitude and month (see above). Estimates for 1999–2003 were taken from Anon. (2004).

**LONGLINE continued**

## Tonga

Vessels, Albacore, Bigeye and Yellowfin: Estimates of the number of vessels and the total catch for 1982–1989 were provided by the Ministry of Fisheries; the species composition was determined from logsheet data held at SPC. Catch estimates for 1990–1992 were determined from logsheet data held at SPC. Catches for 1993 were estimated by assuming that one large longliner (*Lofa*) fished for the full year and caught the average annual amount caught by the *Lofa* during 1982–1992, and one large longliner (*Sea Star 1*) fished for seven trips, while four small longliners (*Avalon*, *Capricorn 1*, *Capricorn 2* and *Sea Star 2*) fished for half the year on average. The number of vessels active and catch estimates for 1994–1996 were determined from logsheet and trip summary data held at SPC. Catch estimates for 1996–2000 were determined assuming each vessel active caught 100 tonnes per year; the species composition was taken as the average determined from logsheet data held by SPC for 1993–2001. The numbers of vessels for 1997–1999 were provided by the Department of Fisheries (Ha'unga, pers. comm., June 2000). The number of vessels for 2000 was provided by SPC (Desurmont, pers. comm., October 2000). The number of vessels and catch estimates for 2001 were determined from logsheet data held by SPC and catch totals provided by the Ministry of Fisheries (Aho, pers. comm., July 2002). All CPUE estimates were determined from logsheet data held at SPC. The number of vessels and catch estimates for 2002 were determined from logsheet and landings data held at SPC; catches were allocated to the year in which the trip ended.

## United States of America

Vessels, Albacore, Bigeye and Yellowfin in the WCPO, excluding American Samoa and Hawaii/California: The number of vessels and catches were estimated from landings data, logsheet data and port sampling data held at SPC. These vessels fished or unloaded in the Federated States of Micronesia, Fiji Islands, Guam, Marshall Islands, Palau and Papua New Guinea. CPUE was estimated from logsheet data held by SPC.

Vessels, Bigeye and Yellowfin for vessels based in Hawaii and California: Estimates for 1950–1998 were provided by the National Marine Fisheries Service (Coan, pers. comm., May 1999, June 2001; Skillman, pers. comm., May 2004); data for 1950–1986 may contain some dressed weights. The numbers of vessels and catch estimates for 1999–2003 were taken from Ito et al. (2004). A small proportion of the catches were taken in the Eastern Pacific Ocean.

## Vanuatu

Vessels, Albacore, Bigeye and Yellowfin: All estimates for 1995–1998 were determined from logsheet data held at SPC. The number of vessels and catch estimates for 2000–2002 were determined from logsheet and landings data held at SPC; catches were allocated to the year in which the trip ended.

**POLE-AND-LINE**

## Australia

Albacore: All estimates were provided by the Bureau of Rural Sciences (BRS) (Caton, pers. comm., March 1996; Findlay, pers. comm., June 2002). Pole-and-line catches for 1970–1980 were incidental catches taken by vessels targeting southern bluefin tuna.

Vessels, Skipjack and Yellowfin: Estimates for 1976–1984 were determined from logsheet data held at SPC. Estimates for 1986–1992 were provided by Heinz-Greenseas (Bateman, quoted in Ward, pers. comm., June 1993); these estimates are for the fishing season, from November to June; catch and effort have been allocated to the year in which the season ended. All estimates for 1993–2002 were provided by BRS (Ward, pers. comm., June 1996, June 1997, May 1998, April 1999; Findlay, pers. comm., June 2002; Bromhead, pers. comm., May 2003); estimates for 1993–1996 and 1998 are based on logsheet data, while those for 1997 are based on landings.

**POLE-AND-LINE continued**

## Fiji Islands

Vessels, Bigeye, Skipjack and Yellowfin: All estimates except CPUE for 1974–1975 were provided by the Fisheries Division (Sharma, pers. comm. to Coan, 1997). All estimates except CPUE for 1976–1992 were provided by the Fisheries Division (Sharma, pers. comm., May 1990, June 1991, March 1992, April 1993; Adams, pers. comm., June 1991). The numbers of vessels active for 1979–1982 and 1985–1989 were taken from annual reports of the Fisheries Division. The catch estimates represent landings at the Pacific Fishing Company Ltd cannery in Levuka. Catches by Kiribati and Tuvalu vessels which operated in Fijian waters under charter are excluded; catches for those vessels are reported in Tables 30 and 35 respectively. Catches by the *Ika 3*, formerly registered as a New Zealand vessel, are included. The catch estimates for 1991 also include 389 tonnes caught by four vessels in the waters of Solomon Islands; these catches were determined from logsheet data held at SPC. All estimates except CPUE for 1993–1994 were taken from Tuwai (1999). All estimates except CPUE for 1995–1999 were taken from Tuwai (2000). The number of vessels and catch estimates for 2000 were taken from Tuwai & Lagibalavu (2001). The number of vessels and catch estimates for 2001 was taken from Amoe (2002); the catch estimates cover only one of the two vessels active. The numbers of vessels for 2002–2003 were taken from Amoe (2004). All CPUE estimates were determined from logsheet data held at SPC.

## French Polynesia

Vessels, Bigeye, Skipjack and Yellowfin: Estimates for 1979–1989 and CPUE for 1975–1989 were taken from Josse et al. (1993). The numbers of vessels active for 1980–1989 were provided by Établissement pour la Valorisation des Activités Aquacoles et Maritimes (EVAAM) (Yen, pers. comm., May 1992). The estimates for 1979–1989 are for the *bonitier* fleet based in Papeete; they do not cover *bonitiers* based elsewhere. The numbers of vessels and catch estimates for 1990–1995 were taken from Stein (2000). The numbers of vessels and catch estimates for 1996 were taken from Misselis (2003). The numbers of vessels and catch estimates for 1997–2003 were taken from Ponsonnet (2004). CPUE estimates for 1990–1991 are from Josse et al. (1993). The CPUE estimate for 1992 was provided by EVAAM (Yen, pers. comm., June 1994). CPUE estimates for 1995–2003 were determined from the estimates of catches and days fished. All estimates for 1990–2003 cover vessels based in Papeete and those based elsewhere. Catches taken using other methods, such as trolling, harpoon and deep handline, are included. Catches to the east of the WCPO may be included.

## Indonesia

Vessels: All estimates were provided by the Research Institute for Marine Fisheries (Naamin, pers. comm. to Coan, 1997).

Bigeye: All estimates were determined by adjusting estimates of yellowfin catches for the inclusion of bigeye. The proportion of bigeye in the catch of yellowfin was estimated as 10 per cent for pole-and-line (Hampton et al. 1996). For the sources of the unadjusted estimates of yellowfin, see ‘Yellowfin’ below.

Skipjack: Estimates for 1982 and 1984–1990 were taken from Indo-Pacific Tuna Programme (1991a, 1991b) for Area F71. Estimates for 1980–1981 and 1983 were determined by applying the proportion taken by pole-and-line in 1982 to estimates of the total catch of all gear types, which were taken from Indo-Pacific Tuna Programme (1991a, 1991b). Estimates for 1991–2002 were determined from information provided by the Data and Statistic Sub Directorate of the Directorate General of Capture Fishery (Muranto, pers. comm., May 1993; Naamin, pers. comm., August 1995; Retnowati, pers. comm., June 2003).

**POLE-AND-LINE continued**

Yellowfin: Estimates for 1976–1983 and 1989 were provided by the Research Institute for Marine Fisheries (Naamin, pers. comm. to Coan, 1997). Estimates for 1984–1988 and 1990 were taken from Indo-Pacific Tuna Programme (1991a, 1991b) for Area F71. Estimates for 1991–2002 were determined from information provided by the Data and Statistic Sub Directorate of the Directorate General of Capture Fishery (Muranto, pers. comm., May 1993; Naamin, pers. comm., August 1995; Retnowati, pers. comm., June 2003). All estimates were adjusted for the inclusion of bigeye in the estimated catches of yellowfin; the proportion of bigeye in the catch of yellowfin was estimated at 10 per cent (Hampton et al. 1996).

Japan, combined

Bigeye, Skipjack and Yellowfin: Bigeye and yellowfin estimates of the combined coastal and offshore/distant-water catches for 1952–1971 were taken from Anon. (1980); the combined estimates for 1952–1971 may include catches from the Eastern Pacific. Skipjack estimates of the combined coastal and offshore/distant-water catches for 1951–1968 were provided by the National Research Institute of Far Seas Fisheries (Miyabe, pers. comm., May 1999); the combined estimates for 1951–1968 may include catches from other ocean areas.

Japan, coastal

Vessels, Bigeye, Skipjack and Yellowfin: Estimates of the numbers of vessels for 1953–2002 were taken from Miyabe et al. (2004); these estimates cover vessels under 20 GRT. The decrease from 1994 to 1995 is due to a change of definition for this category of vessel; troll vessels were included until 1994 and excluded thereafter. Skipjack catch estimates for 1970–2002 and bigeye and yellowfin catch estimates for 1972–2002 were taken from Miyabe et al. (2004).

Japan, distant-water/offshore

Vessels, Bigeye, Skipjack and Yellowfin: Estimates of vessel numbers for 1953–2002 were taken from Miyabe et al. (2004). Estimates of skipjack catches for 1969–1971 were provided by the National Research Institute of Far Seas Fisheries (Miyabe, pers. comm., June 2000, July 2003). Estimates of days fished and catches for 1972–2002 were taken from Miyabe et al. (2004). These estimates cover vessels over 20 GRT.

Albacore in the South Pacific Ocean (Table 69): Estimates for 1960–2002 were provided by the National Research Institute of Far Seas Fisheries (Miyabe, pers. comm., July 2003).

Kiribati

Vessels, Bigeye, Skipjack and Yellowfin: Anon. (1979) reported that the Kiribati Government took delivery of a 35-m skipjack pole-and-line vessel, *Nei Manganibuka*, in 1979; however, no catch statistics are given. The numbers of vessels active, days fished and the total catches for 1981–1989 were provided by Te Mautari Inc. (Tekaaata, pers. comm., April 1993). The species composition for 1983–1988 was determined from logsheet data held at SPC, provided by Te Mautari Inc. The species composition for 1981–1982 and 1989 was estimated as the average species composition during 1983–1988 and 1990–1992. All statistics for 1990–1992 were provided by Te Mautari Inc. (Tekaaata, pers. comm., April 1993). The number of vessels active and the total catch for 1993–1994 were provided by the Fisheries Division (Tumoa, pers. comm., January 1994; Kirata, pers. comm., July 1996). The species composition for 1993 was estimated as the average species composition during 1983–1988 and 1990–1992. The species composition for 1994 was determined from logsheet data held at SPC. Catch estimates for 1995–1997 were taken from Tinga (1999).

New Caledonia

Vessels, Skipjack and Yellowfin: All estimates were determined from logsheet data held at SPC.

**POLE-AND-LINE continued**

- New Zealand Vessels, Skipjack and Yellowfin: The numbers of vessels for 1990–2002 were provided by the National Institute of Water and Atmospheric Research (NIWA) (Murray, pers. comm., June 2002, June 2003). The number of vessels for 2003 was provided by the Ministry of Fisheries (Murray, pers. comm., May 2004). Catch estimates for 1990–2001 were taken from Murray et al. (2002). Catch estimates for 2002–2003 were taken from Kendrick et al. (2004).
- Palau Vessels, Skipjack and Yellowfin: Estimates for 1964–1982 cover Okinawan vessels in Palau; these estimates were determined from logsheet data held at SPC. Estimates for 1985–2000 cover one domestic pole-and-line vessel. Estimates for 1985–1992 were provided by the Palau Maritime Authority (Rechebei, pers. comm., May 1993). Estimates for 1993–2000 were taken from Palau Conservation Society (2000).
- Papua New Guinea Vessels, Skipjack and Yellowfin: All estimates for 1970–1981 were determined from logsheet data held at SPC. All estimates for 1984–1985 were taken from Anon. (1989b).
- Solomon Islands Vessels, Skipjack and Yellowfin: Catch estimates for 1971–1974 were determined by applying a species composition of 97 per cent skipjack and 3 per cent yellowfin to total catch estimates taken from Anon. (1989a). The numbers of vessels active during 1973–1974 were taken from Anon. (1985). All estimates for 1975–1980 were taken from Diake (1995). All estimates for 1981–1999 were determined from logsheet data held at SPC. The number of vessels and catch estimates for 2000–2003 were taken from Oreihaka (2004). CPUE for 2000–2003 were determined from logsheet data held at SPC.
- Tuvalu Vessels, Skipjack and Yellowfin: Estimates for 1982–1983 and 1987–1988 were determined from logsheet data held at SPC. The total catches for 1984–1986 and 1989 were provided by the National Fishing Company of Tuvalu (NAFICOT) (Faulkner, pers. comm., 1990); the species composition was determined from logsheet data held at SPC for 1984–1986, and by assuming a species composition of 95 per cent skipjack and 5 per cent yellowfin for 1989. All estimates for 1990–1992 were determined from data collected while the vessel was under charter to SPC for the Regional Tuna Tagging Project; catch estimates cover retained fish only and exclude fish tagged and released.
- United States of America Vessels, Skipjack and Yellowfin: Estimates for 1970–1996 were provided by the National Marine Fisheries Service (Coan, pers. comm., August 2000, June 2001). Estimates for 1997 were taken from Ito et al. (2002). Estimates for 1998–2001 were taken from Ito et al. (2003). Estimates for 2002–2003 were provided by NMFS (Skillman, pers. comm., May 2004).

**PURSE SEINE**

- Australia, domestic Vessels, Bigeye, Skipjack and Yellowfin: The skipjack catch estimate for the 1974/75 season was taken from Blackburn & Serventy (1981), quoted in Tuna Programme (1984). All estimates for 1978–2002 were provided by the Bureau of Rural Sciences (Ward, pers. comm., May 1998, April 1999, May 1999, June 2000; Robins, pers. comm., August 2001; Findlay, pers. comm., June 2002; Bromhead, pers. comm., May 2003); estimates for 1978–1996 and 1998–2000 were determined from logsheet data, while those for 1997 were determined from landings.

**PURSE SEINE continued**

- Australia, distant-water Vessels, Bigeye, Skipjack and Yellowfin: Estimates for 1988 include two vessels that fished in Solomon Islands waters and one vessel that fished in Papua New Guinea waters. The data for the vessels which fished in Solomon Islands were taken from Anon. (1989a); statistics for the vessel which fished in Papua New Guinea were determined from logsheet data held at SPC. All estimates for 1989–1993 were determined from logsheet data held at SPC; they represent vessels that fished in the waters of the Federated States of Micronesia and Papua New Guinea. Catches by vessels operating under the Caroline Fishing Company, an Australia – Federated States of Micronesia joint venture, are excluded; these vessels are covered in Table 39. All estimates of bigeye and yellowfin catches were modified following the procedure described on page 21.
- China Vessels, Bigeye, Skipjack and Yellowfin: The number of vessels, days fished and catch estimates for 2001 were taken from Xu (2002); estimates of CPUE were determined from the estimates of catches and days fished. All estimates for 2002 were determined from logsheet data held at SPC. The number of vessels and catch estimates for 2003 were taken from Song et al. (2004). Estimates of bigeye and yellowfin catches for 2002–2003 were modified following the procedure described on page 21.
- Fed. States of Micronesia Vessels, Bigeye, Skipjack and Yellowfin: Estimates for 1991–1992 were determined from information provided by an industry source and the Micronesian Maritime Authority (Heberer, pers. comm., May 1994, June 1994). CPUE statistics for 1991–1992 were determined from logsheet data held at SPC. Estimates for 1993–2003 were determined from logsheet and unloadings data held at SPC. All estimates of bigeye and yellowfin catches were modified following the procedure described on page 21.
- Indonesia, domestic Vessels: No estimates are available.
- Bigeye: All estimates were determined by adjusting estimates of yellowfin catches for the inclusion of bigeye. The proportion of bigeye in the catch of yellowfin was estimated as 10 per cent for purse seine (Hampton et al. 1996). For the sources of the unadjusted estimates of yellowfin, see ‘Yellowfin’ below.
- Skipjack: Estimates for 1982 and 1984–1990 were taken from Indo-Pacific Tuna Programme (1991a, 1991b) for Area F71. Estimates for 1980, 1981 and 1983 were determined by applying the proportion taken by purse seine in 1982 to estimates of the total catch of all gear types, which were taken from Indo-Pacific Tuna Programme (1991a, 1991b). The estimates for 1991–2002 were determined by applying the proportion taken by purse seine in 1990 to estimates of the total catch of all gear types; estimates of the total catch for 1991–2002 were provided by the Data and Statistic Sub Directorate of the Directorate General of Capture Fishery (Retnowati, pers. comm., June 2003).
- Yellowfin: Estimates for 1980–1981 and 1983 were provided by the Research Institute for Marine Fisheries (Naamin, pers. comm. to Coan, 1997). Estimates for 1982 and 1984–1990 were taken from Indo-Pacific Tuna Programme (1991a, 1991b) for Area F71. Estimates for 1991–2002 were determined from information provided by the Data and Statistic Sub Directorate of the Directorate General of Capture Fishery (Muranto, pers. comm., May 1993; Naamin, pers. comm., August 1995; Retnowati, pers. comm., June 2003). All estimates were adjusted for the inclusion of bigeye in the estimated catches of yellowfin; the proportion of bigeye in the catch of yellowfin was estimated at 10 per cent (Hampton et al. 1996).

**PURSE SEINE continued**

- Indonesia, distant-water Vessels, Bigeye, Skipjack and Yellowfin: The total catch in 1988 was provided by an industry source; the species composition was determined from logsheet data held at SPC. Catches for 1986–1987 and 1989 were estimated by adjusting the catches during 1988 by the ratio of the catch rates in 1986–1987 and 1989 to the catch rates in 1988. All CPUE estimates were determined from logsheet data held by SPC. All estimates of bigeye and yellowfin catches were modified following the procedure described on page 21.
- Japan, coastal Vessels, Bigeye, Skipjack and Yellowfin: The numbers of vessels for 1969–2002 were taken from Miyabe et al. (2004). Catch estimates for 1951–1969 were provided by the National Research Institute of Far Seas Fisheries (Miyabe, pers. comm., May 1998). Catch estimates for 1970–2002 were taken from Miyabe et al. (2004).
- Japan, distant-water/offshore Vessels, Bigeye, Skipjack and Yellowfin: The number of vessels for 1969–2003 and days fished and catch estimates for 1970–2003 were taken from Miyabe et al. (2004). Estimates of the number of offshore/distant-water vessels cover vessels over 200 GRT, whereas the catch estimates for offshore/distant-water vessels cover vessels over 100 GRT.
- Kiribati Vessels, Bigeye, Skipjack and Yellowfin: All estimates for 1994–2003 were determined from logsheet and unloadings data held at SPC. All estimates of bigeye and yellowfin catches were modified following the procedure described on page 21.
- Marshall Islands Vessels, Bigeye, Skipjack and Yellowfin: All estimates were determined from logsheet and unloadings data held at SPC. All estimates of bigeye and yellowfin catches were modified following the procedure described on page 21.
- Mexico Bigeye, Skipjack and Yellowfin: All estimates were determined from logsheet data held at SPC. All estimates of bigeye and yellowfin catches were modified following the procedure described on page 21.
- New Zealand Vessels: Estimates for 1983–1988 were determined from logsheet data held at SPC. Estimates for 1989–2002 were provided by the National Institute of Water and Atmospheric Research (NIWA) (Murray, pers. comm., June 2002, June 2003). Estimates for 2003 were provided by the Ministry of Fisheries (Murray, pers. comm., May 2004).  
Bigeye, Skipjack and Yellowfin: Estimates of the numbers of days fished and catches for 1983–1986, and CPUE for 1987–1988, were determined from logsheet data held at SPC. Catch estimates for 1987–1989 were taken from Murray et al. (2000); these estimates are for the fishing year, October–September. Catch estimates for 1990–2001 were determined from statistics for domestic vessels taken from Murray et al. (2002) and data for distant-water vessels held by the OFP. Catch estimates for 2002–2003 were taken from Kendrick et al. (2004). Estimates of bigeye and yellowfin catches by distant-water vessels were modified following the procedure described on page 21. The skipjack catches do not include those of chartered American vessels in the New Zealand zone; these catches are included in Table 53.
- Papua New Guinea Vessels, Bigeye, Skipjack and Yellowfin: All estimates for 1994–2002 were determined from logsheet and unloadings data held at SPC. The number of vessels and catch estimates for 2003 were provided by the National Fisheries Authority of Papua New Guinea (Komuru, pers. comm., July 2004). All estimates of bigeye and yellowfin catches were modified following the procedure described on page 21.
- Philippines, domestic Vessels: Estimates for 1980–1993 were provided by the Bureau of Fisheries and Aquatic Sciences (Ganaden, pers. comm. to Coan, 1997). Estimates for 1998–2000 were taken from Barut (2003). Ringnet vessels are included.

**PURSE SEINE continued**

Bigeeye, Skipjack and Yellowfin: All estimates for 1970–1996 were taken from Lawson & Williams (1998). Estimates of the total catch of skipjack and combined yellowfin and bigeye for 1997–2002 were provided by the Bureau of Agricultural Statistics (Lingbawan, pers. comm., May 1999; Recide, pers. comm., June 2002; Adriano, pers. comm., May 2003); catches by species were estimated using the method in Lawson & Williams (1998) and the proportions by gear type for 1996.

- Philippines, distant-water Vessels, Bigeye, Skipjack and Yellowfin: Estimates for 1982, 1984, 1988–1991 and 1999–2002 were determined from logsheet data held at SPC; these statistics cover catches taken in the waters of Papua New Guinea and Solomon Islands. The numbers of vessels and catch estimates for 1985–1987 and 1992–1998 were determined from data provided by industry sources. The estimates for 1992–1998 cover catches taken primarily in the waters of Papua New Guinea and Solomon Islands; about 20 per cent were taken in the waters of Indonesia and the Philippines. Catch estimates for 2003 were provided by the National Fisheries Authority of Papua New Guinea (Kumoru, pers. comm., July 2004). CPUE estimates for 1992–1998 were determined from logsheet data held at SPC. All estimates of bigeye and yellowfin catches were modified following the procedure described on page 21.
- Philippines, ringnet See Philippines, domestic.
- Republic of Korea Vessels, Bigeye, Skipjack and Yellowfin: The number of vessels and catch estimates for 1980–1996 were taken from Koh (2001). The number of vessels and catch estimates for 1997 were taken from Koh et al. (2002). The number of vessels and catch estimates for 1998 were taken from Koh et al. (2003). The number of vessels and catch estimates for 1999–2003 were taken from Yang et al. (2004). CPUE estimates for 1994–2003 were determined from logsheet data held at SPC. All estimates of bigeye and yellowfin catches were modified following the procedure described on page 21.
- Russia Vessels, Bigeye, Skipjack and Yellowfin: An estimate of the total catch for 1985 and estimates of skipjack and yellowfin catches for 1986–1993 were provided by the Pacific Research Institute of Fisheries and Oceanography (TINRO) (Karyakin, pers. comm., March 1992, April 1993, March 1995). The species composition for 1985 was estimated using the average species composition for 1986–1987. Estimates for 1994 were provided by the Fisheries Division, Solomon Islands (Oreihaka, pers. comm., May 1995); these vessels operated under the Rauru Marrisco joint venture between Marrisco Company, Singapore and Choiseul Province, Solomon Islands and were active under the joint venture from January to May 1994; the estimates do not cover catches that may have been taken from June to December 1994. All estimates of bigeye and yellowfin catches were modified following the procedure described on page 21.
- Solomon Islands Vessels, Bigeye, Skipjack and Yellowfin: Estimates of the total catch for 1980–1986 were taken from Anon. (1989a); the species composition was determined from logsheet data held at SPC. Estimates for 1987–1988 were taken from Anon. (1989a). All estimates for 1989–2000 were determined from logsheet data held at SPC. All estimates for 2001–2002, except CPUE for 2002, were determined from information provided by the Fisheries Division (Maneirira, pers. comm., June 2002, May 2003). The number of vessels and catch estimates for 2003 were taken from Oreihaka (2004). CPUE estimates for 2002–2003 were determined from logsheet data held at SPC. All estimates of bigeye and yellowfin catches were modified following the procedure described on page 21.
- Spain Vessels, Bigeye, Skipjack and Yellowfin: All estimates for 1999–2000 and 2002 were determined from logsheet data held by SPC. The number of vessels and catch estimates for 2001 were provided by the Organización de Productores Asociados de Grandes Atuneros Congeladores (OPAGAC) (Morón, pers. comm., June 2002).

**PURSE SEINE continued**

- Chinese Taipei Vessels: Estimates for 1983–1985, 1989–1990 and 1992–1996 were determined from logsheet data held at SPC. Estimates for 1986–1988 and 1991 were provided by National Taiwan University (Sun, pers. comm. to Coan, 1997). Estimates for 1997–1998 were taken from Wang et al. (1999). The estimate for 1999 was taken from Wang et al. (2000). The estimate for 2000 was provided by the Overseas Fisheries Development Council (Wang, pers. comm., August 2001). The estimate for 2001 was taken from Wang et al. (2002). The estimates for 2002–2003 were provided by the Overseas Fisheries Development Council (Chang, pers. comm., May 2003, May 2004).
- Bigeye, Skipjack and Yellowfin: Total catches for 1983–1991 were estimated by assuming that each vessel caught 4000 tonnes annually; the species composition was determined from logsheet data held at SPC. An estimate of the total catch for 1992 was provided by an industry source; the species composition was determined from logsheet data held at SPC. Catch estimates for 1993–1994 were taken from Chang & Lu (1998). Catch estimates for 1995 were taken from Wang et al. (2000). Catch estimates for 1996 were taken from Wang and Kuo (2001). Catch estimates for 1997 were taken from Wang et al. (2002). Catch estimates for 1998–2002 were taken from Anon. (2003). Catch estimates for 2003 were provided by the Overseas Fisheries Development Council (Chang, pers. comm., May 2004). CPUE estimates for 1993–2001 were determined from logsheet data held at SPC. Estimates of bigeye and yellowfin catches for 1983–1998 were modified following the procedure described on page 21; estimates for 1999–2003 were adjusted by the Overseas Fisheries Development Council.
- United States of America Vessels, Bigeye, Skipjack and Yellowfin: Estimates for 1976–1987 were taken from Coan & Prescott (1996). Estimates of bigeye and yellowfin catches for 1976–1987 were modified following the procedure described on page 21. CPUE estimates for 1981–1987 were determined from logsheet data held at SPC. All estimates for 1988–1996 were taken from Coan et al. (2002). The numbers of vessels and catch estimates for 1997 were taken from Ito et al. (2002). The numbers of vessels and catch estimates for 1998 were taken from Ito et al. (2003). The numbers of vessels and catch estimates for 1999–2003 were taken from Ito et al. (2004). CPUE estimates for 1997–2001 were taken from Coan et al. (2002). CPUE estimates for 2002–2003 were determined from logsheet data held at SPC.
- Vanuatu Vessels, Bigeye, Skipjack and Yellowfin: All estimates were determined from logsheet and unloadings data held at SPC; catches were allocated to the year in which the trip ended. All estimates of bigeye and yellowfin catches were modified following the procedure described on page 21.
- TROLL**
- American Samoa Bigeye, Skipjack and Yellowfin: Estimates for 1982–1998 were provided by the National Marine Fisheries Service (Coan, pers. comm., August 2000, June 2001; Skillman, pers. comm., June 2002). Estimates for 1999–2003 were taken from Ito et al. (2004).
- Australia Albacore, Bigeye and Yellowfin: All estimates were provided by the Bureau of Rural Sciences (Caton, pers. comm., March 1996; Ward, pers. comm., April 1999; Findlay, pers. comm., June 2002; Bromhead, pers. comm., May 2003, April 2004).
- Canada Vessels, Albacore: The numbers of vessels and catch estimates for the 1987/88 – 1994/95 seasons were provided by Fisheries and Oceans Canada (Shaw, pers. comm., July 2001). Catch estimates for the 1995/96 – 2001/02 seasons were taken from Stocker & Shaw (2003). The numbers of vessels and CPUE estimates for 1995/96 – 2001/02 seasons were provided by Fisheries and Oceans Canada (Stocker, pers. comm., June 2003). All estimates are for the November–May fishing season; the estimates were allocated to the year in which the season ended.

**TROLL continued**

- Fiji Islands Bigeye, Skipjack and Yellowfin: All estimates were provided by the Fisheries Division (Sharma, pers. comm. to Coan, 1997).
- French Polynesia Albacore: Estimates for 1989 were determined from information provided by the Service des Ressources Marines (Stein, pers. comm., May 1999). Estimates for 1990–1993 and 1995–1997 were taken from Stein (2000). Estimates for 1989–1991 include catches by foreign-flagged vessels operated by French Polynesians. Estimates for 2001 were provided by the Service des Ressources Marines (Stein, pers. comm., April 2002); four vessels fished in the French Polynesia EEZ (and not in the Sub-Tropical Convergence Zone).
- Guam Bigeye, Skipjack and Yellowfin: Estimates for 1980–1998 were provided by the National Marine Fisheries Service (Coan, pers. comm., August 2000, June 2001; Skillman, pers. comm., June 2002). Estimates for 1999–2003 were taken from Ito et al. (2004). These estimates cover the commercial fishery only and not the recreational fishery.
- New Zealand Vessels: Estimates for the 1986/87–2000/01 seasons were provided by the National Institute of Water and Atmospheric Research (NIWA) (Murray, pers. comm., June 2002, June 2003). Estimates for the 2001/02–2002/03 seasons were provided by the Ministry of Fisheries (Murray, pers. comm., May 2004).  
Albacore: Catch estimates for 1967–1988 were taken from Murray (1990). Catch estimates for 1989 were taken from Murray & Griggs (2001). Catch estimates for 1990–2001 were taken from Murray et al. (2002). Catch estimates for 2002–2003 were taken from Kendrick et al. (2004). Estimates of CPUE were determined from logsheet data held at SPC.
- Northern Marianas Skipjack and Yellowfin: Estimates for 1983–1998 were provided by the National Marine Fisheries Service (Coan, pers. comm., August 2000, June 2001; Skillman, pers. comm., June 2002). Estimates for 1999–2003 were taken from Ito et al. (2004). Estimates for 1983–1999 and 2000–2001 are not comparable since estimates for the former period cover only commercial fishing and are based on the voluntary submission of data, whereas estimates for the latter period cover all pelagic fisheries and are based on a statistically designed survey.
- United States of America Bigeye, Skipjack and Yellowfin: These statistics cover vessels based in Hawaii. Skipjack and yellowfin estimates for 1995–1998 and bigeye estimates for 1996–1998 were provided by the National Marine Fisheries Service (NMFS) (Coan, pers. comm., August 2000, June 2001). Estimates for 1999–2003 were taken from Ito et al. (2004). These estimates cover the commercial fishery only and not the recreational fishery.  
Albacore, seasonal catches (Table 58): These statistics cover the South Pacific albacore troll fishery and not the troll and handline fisheries in American Samoa, Guam, Northern Marianas or Hawaii. The numbers of vessels and catch estimates for the 1985/86–1996/97 seasons were provided by NMFS (Childers, pers. comm., May 1996; Coan, pers. comm., June 2001). The numbers of vessels and catch estimates for the 1997/98 seasons were taken from Ito et al. (2003). The numbers of vessels and catch estimates for the 1998/99–2002/03 seasons were taken from Ito et al. (2004). The catch estimates do not cover discards. CPUE estimates for the 1985/86–2001/02 seasons were provided by NMFS (Coan, pers. comm., June 2003).  
Albacore, annual catches (Table 69): These statistics cover the South Pacific albacore troll fishery and not the troll and handline fisheries in American Samoa, Guam, Northern Marianas or Hawaii. Catch estimates for 1986–1997 were provided by NMFS (Coan, pers. comm., June 2001). Catch estimates for 1998 were taken from Ito et al. (2003). Catch estimates for 1999–2003 were taken from Ito et al. (2004). The catch estimates do not cover discards. Part of the catch was taken in the Eastern Pacific Ocean.

**OTHER**

- Albacore, North Pacific All estimates were provided by the National Marine Fisheries Service (Coan, pers. comm., July 2004). These estimates were compiled for the North Pacific Albacore Workshop and were updated on 13 July 2004.
- Albacore, WCPO All estimates were determined by subtracting estimates for the Eastern Pacific from the total of estimates for the South Pacific and the North Pacific.
- Atlantic Ocean All estimates were taken from the FISHSTAT\_ICCAT database, version February 2004, which was downloaded from the website of the International Commission for the Conservation of Atlantic Tunas (ICCAT), located at <http://www.iccat.es>.
- Australia, recreation Albacore: All estimates were provided by the Bureau of Rural Sciences (Caton, pers. comm., March 1996; Findlay, pers. comm., June 2002; Bromhead, pers. comm., May 2003).
- Australia, unclassified Bigeye, Skipjack and Yellowfin: All estimates were provided by the Bureau of Rural Sciences (Bromhead, pers. comm., April 2004). These catch estimates cover rod and reel, handline, minor line and troll.
- Eastern Pacific Ocean All estimates were provided by the Inter-American Tropical Tuna Commission (Suter, pers. comm., July 2001, June 2003, July 2004), except estimates of the longline catch of bigeye during 1954–1961, which were determined from catch and effort data, grouped by 5° latitude, 5° longitude and month, provided by the Fisheries Agency of Japan.
- French Polynesia  
*poti marara* *Poti marara* are coastal vessels ranging from 18 ft (5.5 m) to 26 ft (7.9 m), with engines ranging from 36-hp outboards to 250-hp inboards, depending on the boat length, age and fishing strategy. Gear types used include about 60 per cent troll, 20 per cent harpoon, 10 per cent deep handline, 7 per cent pole-and-line, as well as spear gun, scoops, scuba diving and nets. Estimates for 1990–1995 were taken from Stein (2000). Estimates for 1996 were taken from Misselis (2003). Estimates for 1997–2003 were taken from Ponsonnet (2004).
- Indian Ocean All estimates were provided by the Indian Ocean Tuna Commission (Herrera, pers. comm., April 2004).
- Indonesia, handline Bigeye: All estimates were determined by adjusting estimates of yellowfin catches for the inclusion of bigeye. The proportion of bigeye in the catch of yellowfin was estimated as 8.6 per cent for handline (Hampton et al. 1996). For the sources of the unadjusted estimates of yellowfin, see ‘Yellowfin’ below.
- Yellowfin: All estimates for 1970–1990 were taken from Indo-Pacific Tuna Programme (1991a, 1991b) for Area F71, except for 1984–1988, which were provided by the Research Institute for Marine Fisheries (Naamin, pers. comm. to Coan, 1997). Estimates for 1991–2002 were determined from information provided by the Data and Statistic Sub Directorate of the Directorate General of Capture Fishery (Muranto, pers. comm., May 1993; Naamin, pers. comm., August 1995; Retnowati, pers. comm., June 2003). All estimates were adjusted for the inclusion of bigeye in the estimated catches of yellowfin; the proportion of bigeye included in the estimated catch of yellowfin was estimated at 8.6 per cent for handline (Hampton et al. 1996).
- Indonesia, unclassified Bigeye: Estimates for 1970–1998 were determined by adjusting estimates of yellowfin catches for the inclusion of bigeye. The proportion of bigeye in the catch of yellowfin was estimated as 10 per cent for unclassified (Hampton et al. 1996). For the sources of the unadjusted estimates of yellowfin, see ‘Yellowfin’ below.

**OTHER continued**

Skipjack: Estimates for 1950–1969 were made assuming an annual increase equivalent to the average annual increase during 1970–1980 and back-calculating from 1970. Estimates for 1970–1990 were taken from Indo-Pacific Tuna Programme (1991a, 1991b) for Area F71; these estimates were adjusted for pole-and-line and purse-seine catches (see ‘Purse seine’ and ‘Pole-and-line’ above). The estimates for 1991–2002 were determined by subtracting estimates of catches by the other gear types from estimates of the total catch; estimates of the total catch for 1991–2002 were provided by the Data and Statistic Sub Directorate of the Directorate General of Capture Fishery (Muranto, pers. comm., May 1993; Naamin, pers. comm., August 1995; Retnowati, pers. comm., June 2003).

Yellowfin: Estimates for 1950–1969 were made assuming an annual increase equivalent to the average annual increase during 1970–1980 and back-calculating from 1970. Estimates for 1970–1990 were taken from Indo-Pacific Tuna Programme (1991a, 1991b) for Area F71, except estimates for 1982 and 1986–1989, which were provided by the Research Institute for Marine Fisheries (Naamin, pers. comm. to Coan, 1997). Estimates for 1991–2002 were determined from information provided by the Data and Statistic Sub Directorate of the Directorate General of Capture Fishery (Muranto, pers. comm., May 1993; Naamin, pers. comm., August 1995; Retnowati, pers. comm., June 2003). All estimates were adjusted for the inclusion of bigeye in the estimated catches of yellowfin; the proportion of bigeye in the catch of yellowfin was estimated at 10 per cent for unclassified gear types (Hampton et al. 1996).

Japan, unclassified

Bigeye, Skipjack and Yellowfin: Estimates of the skipjack catch for 1951–1969 were provided by the National Research Institute of Far Seas Fisheries (Miyabe, pers. comm., May 1998, May 1999, June 2000). Bigeye, skipjack and yellowfin catch estimates for 1970–2002 were taken from Miyabe et al. (2004).

Kiribati, artisanal

Skipjack and Yellowfin: The estimate of the yellowfin catch for 1988 was determined by applying the proportion of scombrids, 15.6835 per cent, to an estimate of the total artisanal catch in the Gilbert group, 11,553 t (Mees et al. 1988). A small amount of skipjack is included in the yellowfin estimate. The estimate of the yellowfin catch for 1988 was used for 1980–1987 and 1989–1998. Catch estimates for 1999–2003 were taken from Awira (2004); these estimates cover skiffs that troll for tuna.

New Zealand, unclassified

Bigeye, Skipjack and Yellowfin: Estimates for 1974–1989 were provided by the National Institute of Water and Atmospheric Research (NIWA) (McKoy, pers. comm. to Coan, 1997). Estimates for 1990–2001 were taken from Murray et al. (2002). Catch estimates for 2002–2003 were taken from Kendrick et al. (2004).

Philippines, gill net

Bigeye, Skipjack and Yellowfin: Estimates of skipjack and yellowfin catches for 1950–1969 were determined assuming an annual increase equivalent to the average annual increase during 1970–1980 and back-calculating from 1970. All estimates for 1970–1996 were taken from Lawson & Williams (1998). Estimates of the total catch of skipjack and combined yellowfin and bigeye for 1997–2002 were provided by the Bureau of Agricultural Statistics (Lingbawan, pers. comm., May 1999; Recide, pers. comm., June 2002; Adriano, pers. comm., May 2003); catches by species were estimated using the method in Lawson & Williams (1998) and the proportions by gear type for 1996.

Philippines, handline

See Philippines, gill net.

Philippines, unclassified

See Philippines, gill net.

Chinese Taipei,  
unclassified

Bigeye, Skipjack and Yellowfin: All estimates were provided by National Taiwan University (Sun, pers. comm. to Coan, 1997).

## ESTIMATION OF PURSE-SEINE CATCHES OF BIGEYE AND YELLOWFIN

Estimates of purse-seine catches of bigeye and yellowfin presented in Tables 72 and 79 have been adjusted for the misidentification of bigeye as yellowfin in catch and effort logsheet data and in landings data. The adjusted estimates of bigeye and yellowfin catches were determined from

$$\hat{C}_{sfy} = P_{sfy} \cdot C_{fy} \quad (1)$$

where  $\hat{C}_{sfy}$  is the adjusted catch of species  $s$  (bigeye or yellowfin) by fleet  $f$  in year  $y$ ;  $P_{sfy}$  is an estimate of the “true” proportion of the catch of species  $s$  in the unadjusted combined catch of yellowfin and bigeye for fleet  $f$  in year  $y$ ; and  $C_{fy}$  is the unadjusted combined catch of yellowfin and bigeye for fleet  $f$  in year  $y$ . Further, we have

$$P_{sfy} = \frac{P_{sya} \cdot C_{fya} + P_{syu} \cdot C_{fyu}}{C_{fya} + C_{fyu}} \quad (2)$$

where  $P_{sfy}$  is an estimate of the proportion of species  $s$  in the combined catch of bigeye and yellowfin that was taken in year  $y$  from associated schools;  $C_{fya}$  is the combined catch of bigeye and yellowfin that was reported on logsheets for fleet  $f$  in year  $y$  from associated schools;  $P_{syu}$  is an estimate of the proportion of species  $s$  in the combined catch of bigeye and yellowfin that was taken in year  $y$  from unassociated schools; and  $C_{fyu}$  is the combined catch of bigeye and yellowfin reported on logsheets for fleet  $f$  in year  $y$  from unassociated schools.

For the period 1989–1995, estimates of the  $P_{sya}$  and  $P_{syu}$  were determined from port sampling data covering the United States purse-seine fleet provided by the National Marine Fisheries Service. For other years, the average of the  $P_{sya}$  and  $P_{syu}$  for 1989–1995 were used. The  $P_{sya}$  and  $P_{syu}$  for 1989–1995 are given in the two right-hand columns of the table below. Also shown are estimates for 1988, which are based on sampling in the second half of the year only, and for 1996, during which the United States fleet began to catch a much higher proportion of bigeye, due primarily to the introduction of deeper nets. As can be seen in the table, the proportions of bigeye in the combined catch of bigeye and yellowfin determined from sampling (columns A to D) are weighted by the proportion of small and large fish in the catch (columns E to H).

## ACKNOWLEDGEMENTS

Compilation of the updated statistics presented in this report has been possible through the cooperation of W. Amandy (Philippines), J. Amoe (Fiji), R. Awira (Kiribati), D. Bromhead (Australia), F.C. Chang (Chinese Taipei), A. Coan (United States of America), X. Dai (China), R. Etaix-Bonnin (New Caledonia), M. Herrera (Indian Ocean Tuna Commission), R. Imo (Samoa), P. Jacob (Nauru), T. Kendrick (New Zealand), J.R. Koh (Republic of Korea), L. Kumoru (Papua New Guinea), J. Marurai (Cook Islands), N. Miyabe (Japan), D.Y. Moon (Republic of Korea), T. Murray (New Zealand), M. Ogura (Japan), E. Oreihaka (Solomon Islands), C. Ponsonnet (French Polynesia), D. Retnowati (Indonesia), R. Skillman (United States of America), L. Song (China), J. Suter (Inter-American Tropical Tuna Commission), T. Tsai (Chinese Taipei), L. Xu (China) and W.S. Yang (Republic of Korea).

## BIGEYE IN THE WCPO

**Table 70. Longline catches (tonnes) of bigeye in the WCPO.** Symbols: '...' = missing data; '-' = no effort; '0' = effort, but no catch; '+' = greater than zero, but less than 0.5 tonnes; estimates in parentheses have been carried over from previous years.

## YELLOWFIN IN THE WCPO

**Table 77. Longline catches (tonnes) of yellowfin in the WCPO.** Symbols: '...' = missing data; '-' = no effort; '0' = effort, but no catch; '+' = greater than zero, but less than 0.5 tonnes; estimates in parentheses have been carried over from previous years.
