Details required with the supply of tidal constituent constants		
All of the details required above		
The name and version of the software	TANS	
used to calculate the constants		
The tidal constituent model used	Doodson's method	
(particularly noting the treatment of		
the constituents Sa and Ssa) and		
specifying any related (inferred)		
constituent constants		
The date span used to prepare the	1993-2007 (for 2010)	
constituent constants		
The reference time zone for the	Local (-1200)	
constituents		
The vertical datum to which the	4.012m below BM 22	
constituents apply		
A precision estimate of predictions	Standard Deviation is 0.091	
based on the constituent constants (for		
example, standard deviation of the		
analysis residuals)		
Additional details required with the supply of tidal predictions		
All of the details required above		
A statement describing the tidal	Doodson's method	
prediction process used		
The name and version of the software	Tipp4	
used to calculate the predictions		
A list of the constituent constants used	Standard 112 Constituent list	
or if the list is not provided, the donor		
agency's identifier of the list
