Is technology
enabling better data
for coastal fisheries?

SPC Coastal Fisheries Science & Data
Teams

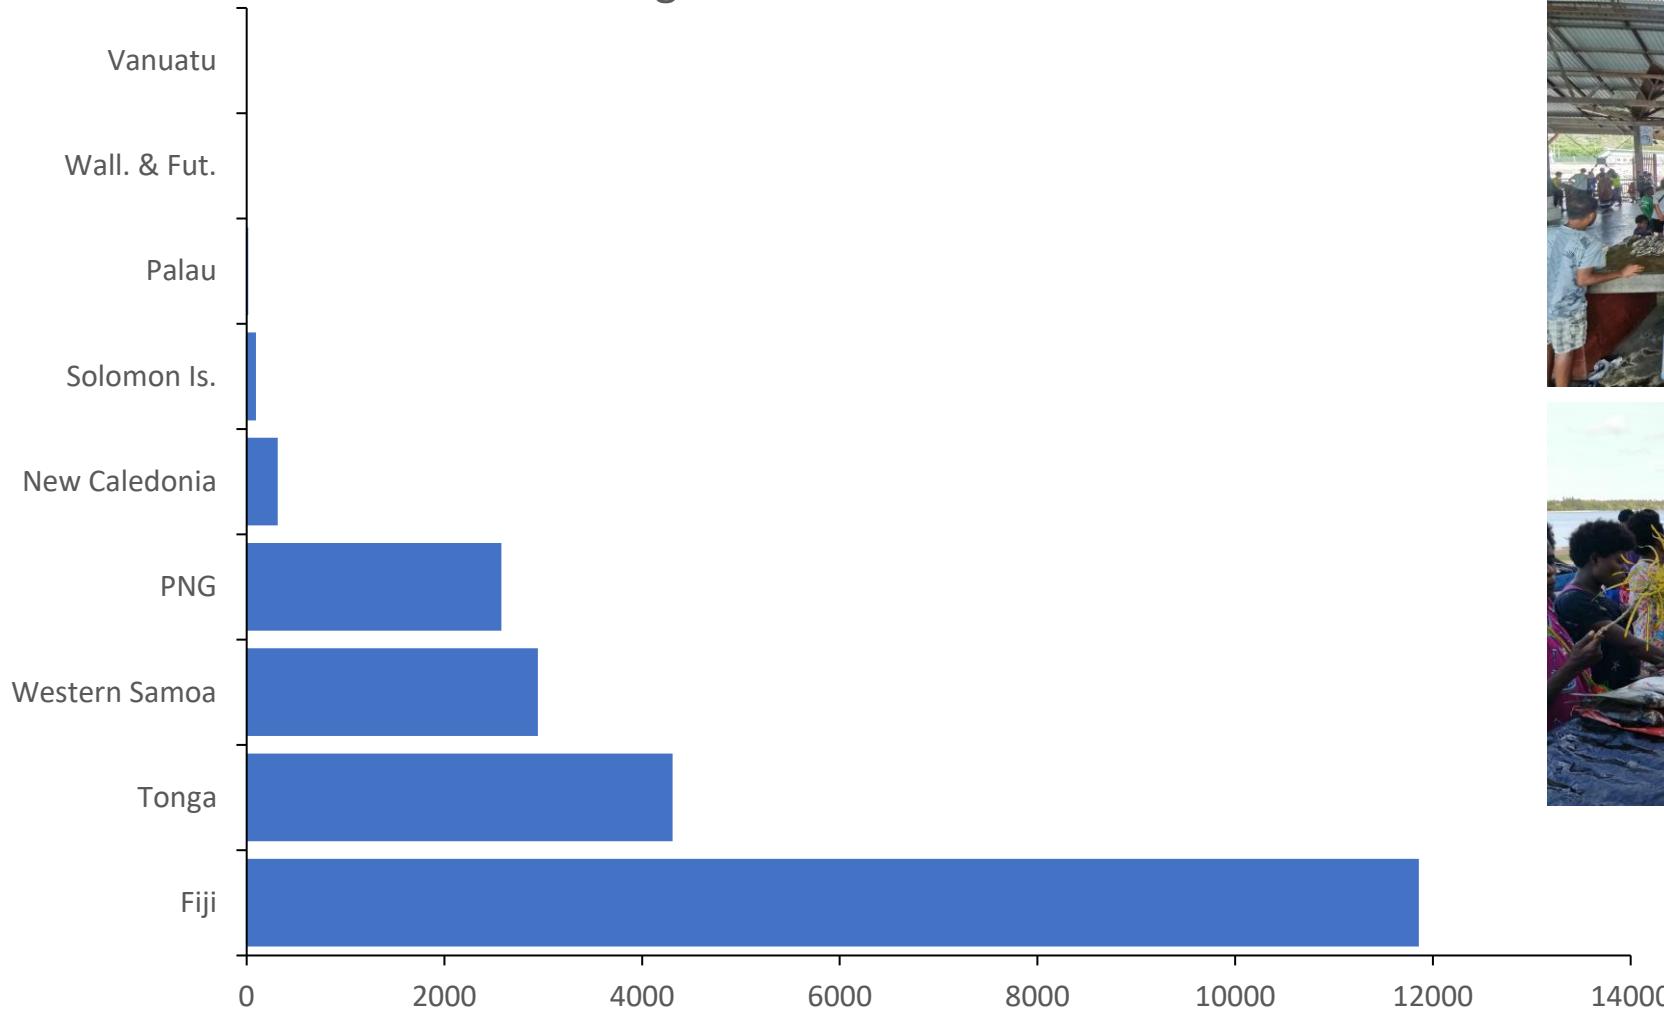

- E-data system in operation for multiple years
 - What is the uptake looking like?
 - Are countries embracing a switch to electronic management of data for coastal fisheries?
 - Is the data being collected reflective of an improved system?
- Moving from collection to analysis and interpretation - OUTCOMES
 - What does this look like?
 - Are there tools available?
 - Suggested pathways

FishKit | The Nature Conservancy

FishKit ▾ Resources About Contact English ▾

What is FishKit?

We developed FishKit, a set of software tools, to tackle the dual challenges limiting sustainability in small-scale fisheries: data gaps and limited know-how among local leaders to use data to design and implement management plans. FishKit makes it easier, faster, and more intuitive for coastal communities to collect and analyze data and transform it into specific management interventions that are proven to work for the majority of small-scale fisheries. Applying FishKit can improve fisheries management in small-scale fisheries, protecting ocean ecosystems while providing food and livelihoods to coastal communities.

Real science, real action, real fast.

What is FishKit?

We developed FishKit, a set of software tools, to tackle the dual challenges limiting sustainability in small-scale fisheries: data gaps and limited know-how among local leaders to use data to design and implement management plans. FishKit makes it easier, faster, and more intuitive for coastal communities to collect and analyze data and transform it into specific management interventions that are proven to work for the majority of small-scale fisheries. Applying FishKit can improve fisheries management in small-scale fisheries, protecting ocean ecosystems while providing tools and livelihoods to coastal communities.

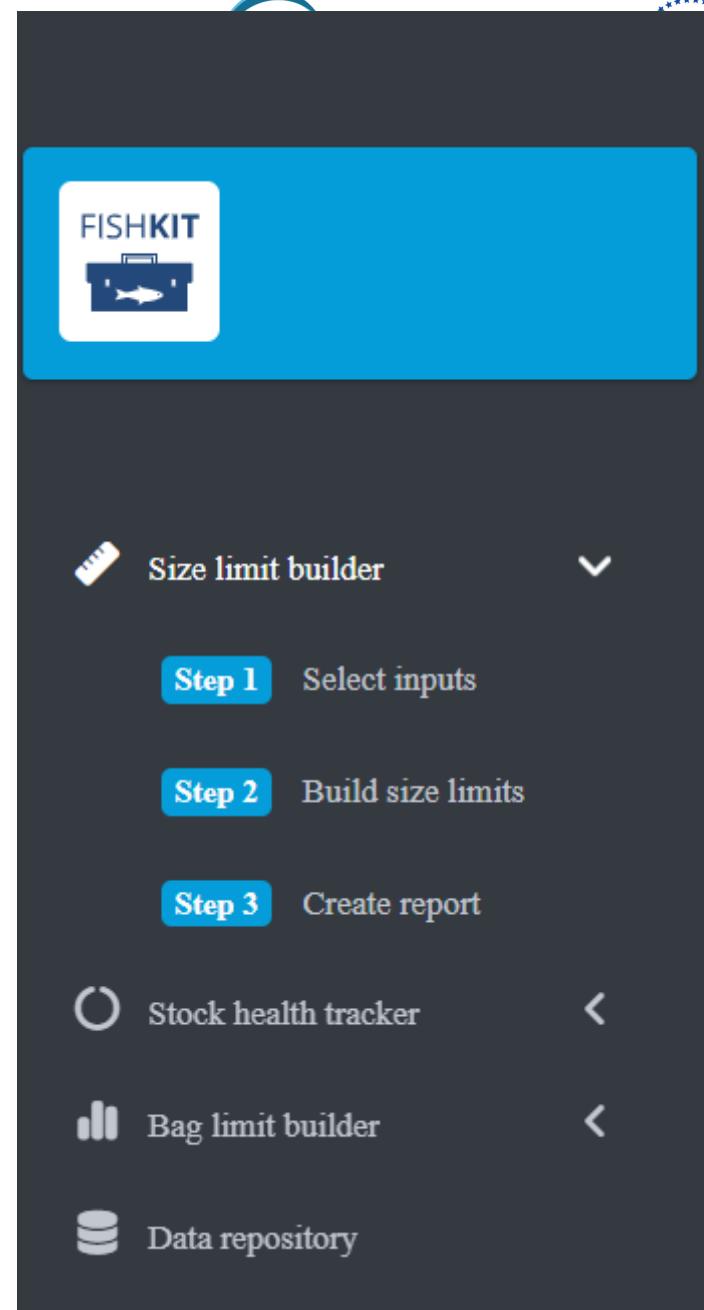

Real science, real action, real fast.

GO TO THE FISHKIT APP

The screenshot shows the FishKit application running in a web browser. The main window displays a vibrant underwater scene with a coral reef and various fish. A sidebar on the left contains a navigation menu with icons and text: "FISHKIT" (selected), "Size limit builder" (radio button), "Stock health tracker" (radio button), "Bag limit builder" (radio button), "Data repository" (radio button), and "Help". Above the sidebar, a green circular profile icon for "AN" and the email "andrew.halford@gmail.com" are displayed. The top of the browser window shows a toolbar with various tabs and icons.

- What does ongoing support look like?

- Data Collection and Data Management – continually being supported by SPC Coastal Team with ongoing improvements and refinements e.g. AI
- Data Analysis and Reporting – STILL continually being supported by SPC Coastal Team but utilising collaborative tools where and as appropriate e.g. FISHKIT, BAREFOOT ECOLOGIST
- Training and development in use of all tools still a core component of SPC Coastal Team
