INAUGURAL MEETING OF THE PACIFIC STATISTICS METHODS BOARD 3-4TH MAY 2018

AN UPDATE ON REGIONAL STATISTICS ACTIVITIES AND PARTNERSHIP PROGRAM - Paper 4

1. THE TEN YEAR PACIFIC STATISTICS STRATEGY 2010-2020 (TYPSS)

Recognising the constraints and challenges facing PICTs in their statistical development the Ten Year Pacific Statistics Strategy (TYPSS) was formulated. This was funded by Australia and came into effect in 2010. The overall objectives of TYPSS focus on improving PICT national data collection activities including coordinated data collection technical support, and standardised tools, methods, systems and processes. In its first two phases (2010-2017), TYPSS gave high priority to ensuring that high-quality data, conforming to international standards, were being collected on a timely basis.

Despite significant progress towards these objectives in its first two phases, a number of significant challenges remained. Prominent amongst these was that many PICTs continued to conduct unplanned statistical collections that were often driven by funding availability and funder-agendas rather than in accordance with their planned national collection cycles. These ad hoc and unplanned collections often result in an inefficient allocation of scarce NSO resources and potentially undermine data quality and comparability.

Furthermore, conducting unplanned statistical collections creates challenges for technical assistance providers (including SPC-SDD) because they require urgent reallocation of scarce TA resources to support the NSO. In addition, unplanned and ad hoc collections inhibit the ability of partners working within the TYPSS framework to plan, mobilise resources and coordinate technical assistance activities in an efficient and cost-effective manner.

2. REGIONAL STATISTICS ACTIVITIES AND PARTNERSHIP PROGRAM

In order to minimise the above constraints it was agreed by the Regional Heads of Planning and Statistics (HOPS) meeting in 2017 that there was a need for a stronger statistical collection coordinating mechanism1. Such a mechanism would aim to: a) align collection activities conducted by PICTs with work plans and funding cycles of technical assistance providers and donor funding sources, and b) to seek the agreement of all partners to work within this framework. It was recognised that in certain circumstances one-off collections might be required in response to emergencies or specific events. But these would be accommodated in an open and transparent manner and in consultation with relevant partners.

In furtherance of this, the TYPSS Mid-Term Evaluation (2016) recommended that the SPC-SDD should take on the role of coordinating technical partners, donors and member countries in the planning and management of statistical collections in the region. This would ensure a more coordinated approach to providing technical support and financial resources to statistics for development in the Pacific.

Significant progress has been made with development and donor partners in formalising partnership agreements or in strengthening cooperation. Three main donors to Pacific statistics for development are: Australia, New Zealand and the World Bank. Core technical partners: SPC, PFTAC, Statistics NZ, Australian Bureau of Statistics; UN Agencies (UNICEF, UNFPA, UNESCAP, UNSIAP), FAO and ILO. The following

Pacific Community (SPC) Headquarters: Noumea, New Caledonia. Regional Offices: Suva, Fiji; Pohnpei, Federated States of Micronesia; Port Vila, Vanuatu. Country Office: Honiara, Solomon Islands.

¹ Supporting Statistical Collections through Coordinated Partnerships and a 5-Year Plan; SPC/HOPS 2017/Session 7 – Working Paper 5; 5th Regional Conference of Heads of Planning and Statistics (HOPS), (Noumea, New Caledonia, 14-16 November 2017)

Annexes presented detail information on upcoming regional statistics activities and partnership program in the region.

Annex1A: Proposed partnership in the provision of technical support to member countries when running core national statistics collection.

Annex 1B: Lead agencies in providing technical support to each of the key economic statistics.

Annex 2A: 5-Year Data Collection Program (2018-2022)

Annex 2B: PFTAC Work Plan for Economic Statistics (2018-2022)

Annex 3: Estimated Cost of Conducting the 5-Year Data Collection Program

3. FUTURE OUTLOOK AND DATA DISSEMINATION

One of the remaining challenges for PICTs is to ensure that their national data is incorporated into the global databases of the UN system, World Bank and ADB. The establishment of the Methods Board will help to give confidence to the global agencies that Pacific data meets global standards. As indicated by the UN Human Development Report Office (UNHDRO) their data is taken from the UN mandated agencies – education data from UNESCO Institute for Statistics; life expectancy, adolescent birth rates, and population numbers from UN Population Division; and gross national income per capita from the World Bank and UN Statistics Division etc. According to UNHDRO, these agencies have the mandate and capacity to collect data from national statistical offices, to compile, verify and disseminate the data by means of their publically accessible databases. In this way, data are comparable across countries and across time in a transparent way. According to UNHDRO, they always advise NSOs to communicate with these UN entities so that the most recent national data are featured in the international databases.

However, this is clearly not happening as the PICTs are supposedly lacking data on many of the core UNHDRO indicators. But in fact the data is available, it is not being adequately disseminated; and the UN agencies are not doing much themselves to look for the data e.g. on PRISM or in the NMDI database. Moreover, the findings of the User Focus Survey undertaken by SPC-SDD in 2017, indicated that improved access and the ability to interrogate Pacific data were amongst the most important criteria for those who used SPC-SDD's current web-sites and databases. These are areas where stronger support and partnership is required between the NSOs, SPC-SDD and the UN and other international agencies. To this end SPC is currently embarking on two major data dissemination projects: i) an SPC corporate data portal, and ii) an improved and scaled-up SDD statistical indicator database with data explorer capability.

The new SPC-SDD web-site and platform will provide detailed metadata for all available datasets and enable easy access to the data through a visual data explorer, and via machine-to-machine transfer. Wherever possible the data available in the indicator database will be curated and verified through quality assurance checks based on the standards set by the Methods Board, in line with global best-practice. Key datasets such as the 132 Pacific Core SDGs, and an improved replacement for the popular National Minimum Development Indicator database² will be accessible directly through the main SPC data-portal, which will then link to the SPC-SDD indicator database for additional functionality.

The new SPC-SDD website-redevelopment, the preparation of the data and its uploading into the new website will require some additional resources for SPC-SDD. Improving access to data, improving the quality of data and the wider dissemination of both data and analyses, will lead to greater use of the data for policy and academic research, and will ultimately lead to better development outcomes for all the people of the Pacific region.

4. RECOMMENDATION

That the Board note this paper.
